Window Snapping

☐ Enable window snapping

BetterSnapTool's features are being rolled into BetterTouchTool

BetterSnapTool will still be available as a lightweight tool focused on window snapping

If you buy BetterSnapTool, you will get a free license for BetterTouchTool

boastr.net

Pay what you like: $4.49–$50
picatext

Easy OCR of short passages of text

picatext

English

picatext

Available on the
Mac App Store

Press ⌘⌥^P

The Features

Did you ever have to typewrite a text from an image? Maybe someone sent you an e-mail with a scanned document and now you have to retype every single sentence. With picatext you can get rid of that! Just choose your image or select a region on the screen and picatext will do the rest for you.

File extraction

With picatext you can open nearly any image format from your file system and extract the text from it.

Screen extraction

Open up picatext, drag a rectangle around a part of your screen and get the included text of it immediately.

Languages

picatext supports character recognition for over 40 different languages. Just select the appropriate language and get your text in no time.

Open #features on this page in a new tab behind the current one

Hyper Key

Caps Lock is in a prime position on your keyboard, but it's pretty useless (especially with automation tools that will automatically ALL CAPS text for you)

Remap Caps Lock to the Hyper key (⇧⌃⌥⌘ at the same time)

Then use the Hyper key in combination with other keys to do all sorts of cool stuff *

* We'll do this later

There are many ways to create a Hyper key

Easy: Hyperkey

More difficult but more powerful: Karabiner-Elements

I would recommend these settings

Note that if you really do need the Caps Lock, just press quickly on that key

Remap physical key to hyper key: `caps lock`

☐ Remap caps lock to: `f19`

☑ Quick press caps lock to execute: `caps lock`

☐ Engage hyper key using trackpad: `top right`

Slide only one touch in from the selected area the trackpad a little. Remove the touch to release.

☑ Include shift in hyper key

☐ Swap option & command on non-Apple keyboards

⌃⌥⌘⇧

Apply modifiers to keypress events and:

☐ Click ☐ Drag ☐ Move ☐ Scroll

☑ Launch on login   v0.9 (9)
☑ Check for updates automatically
☐ Hide menu bar icon
When hidden, relaunch from Finder to open.

If you are using a non-Apple keyboard, this setting could be very useful
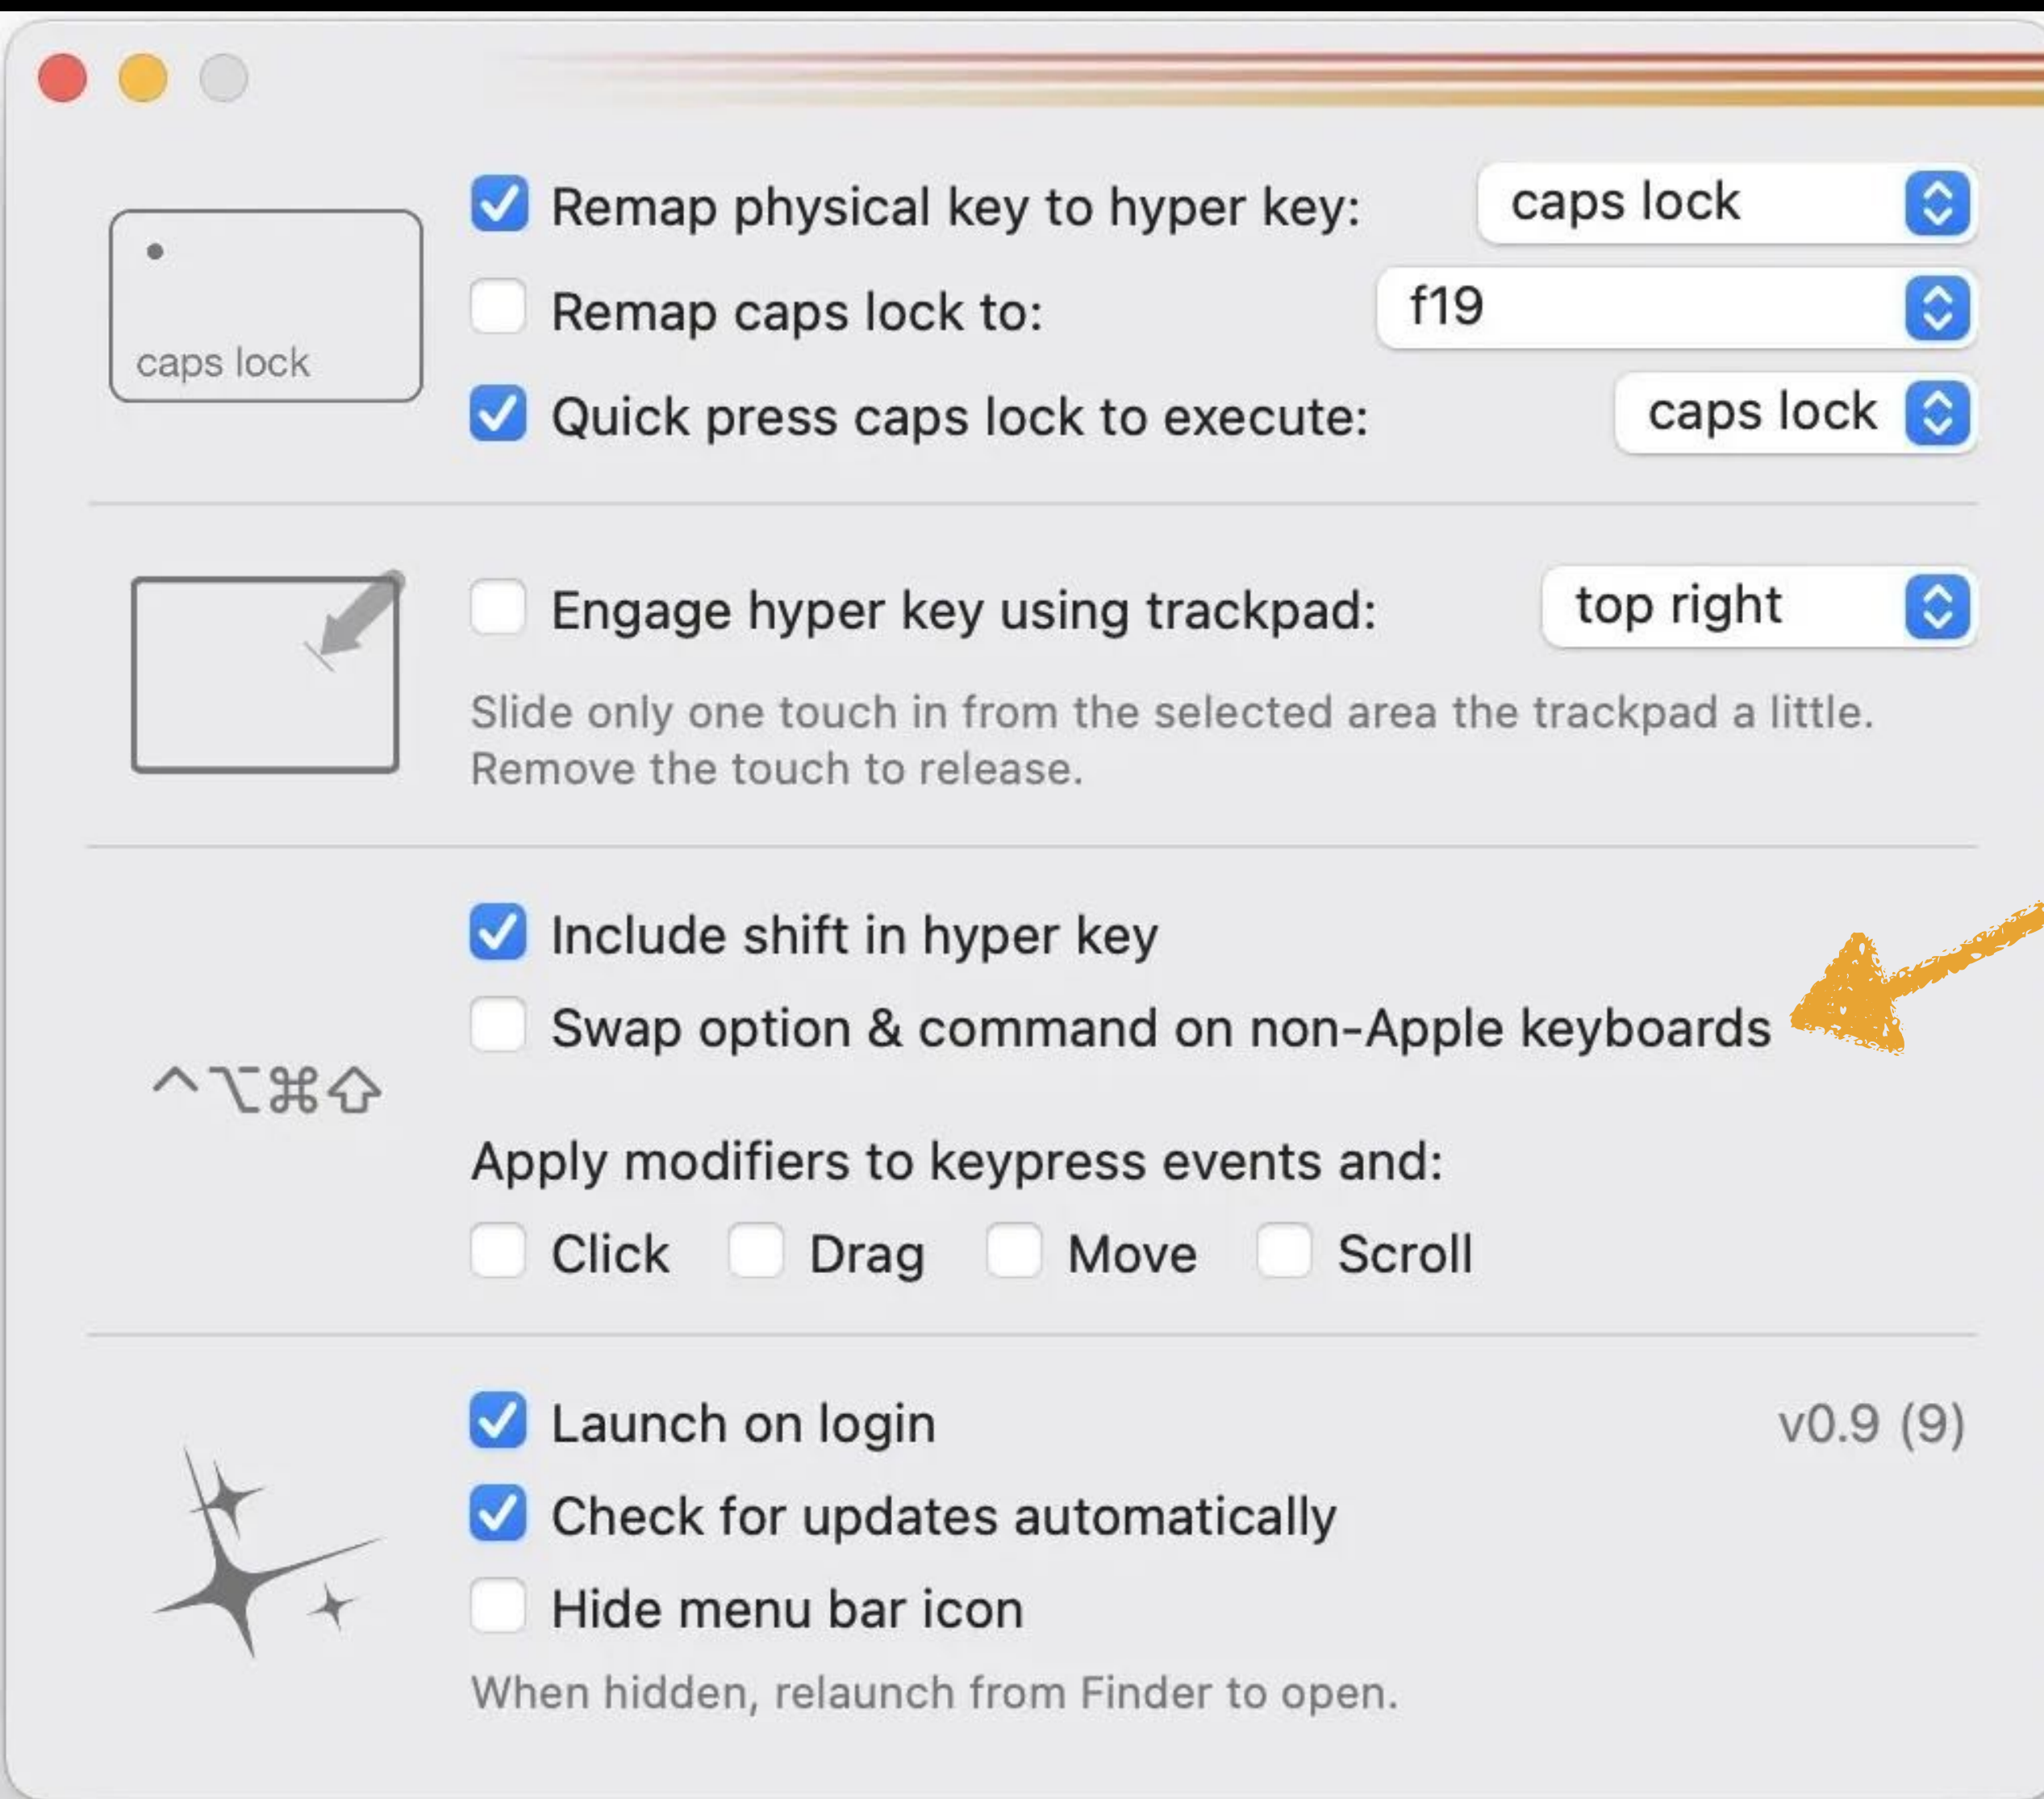

Hold on—we have to test it & make sure our Hyper key is working
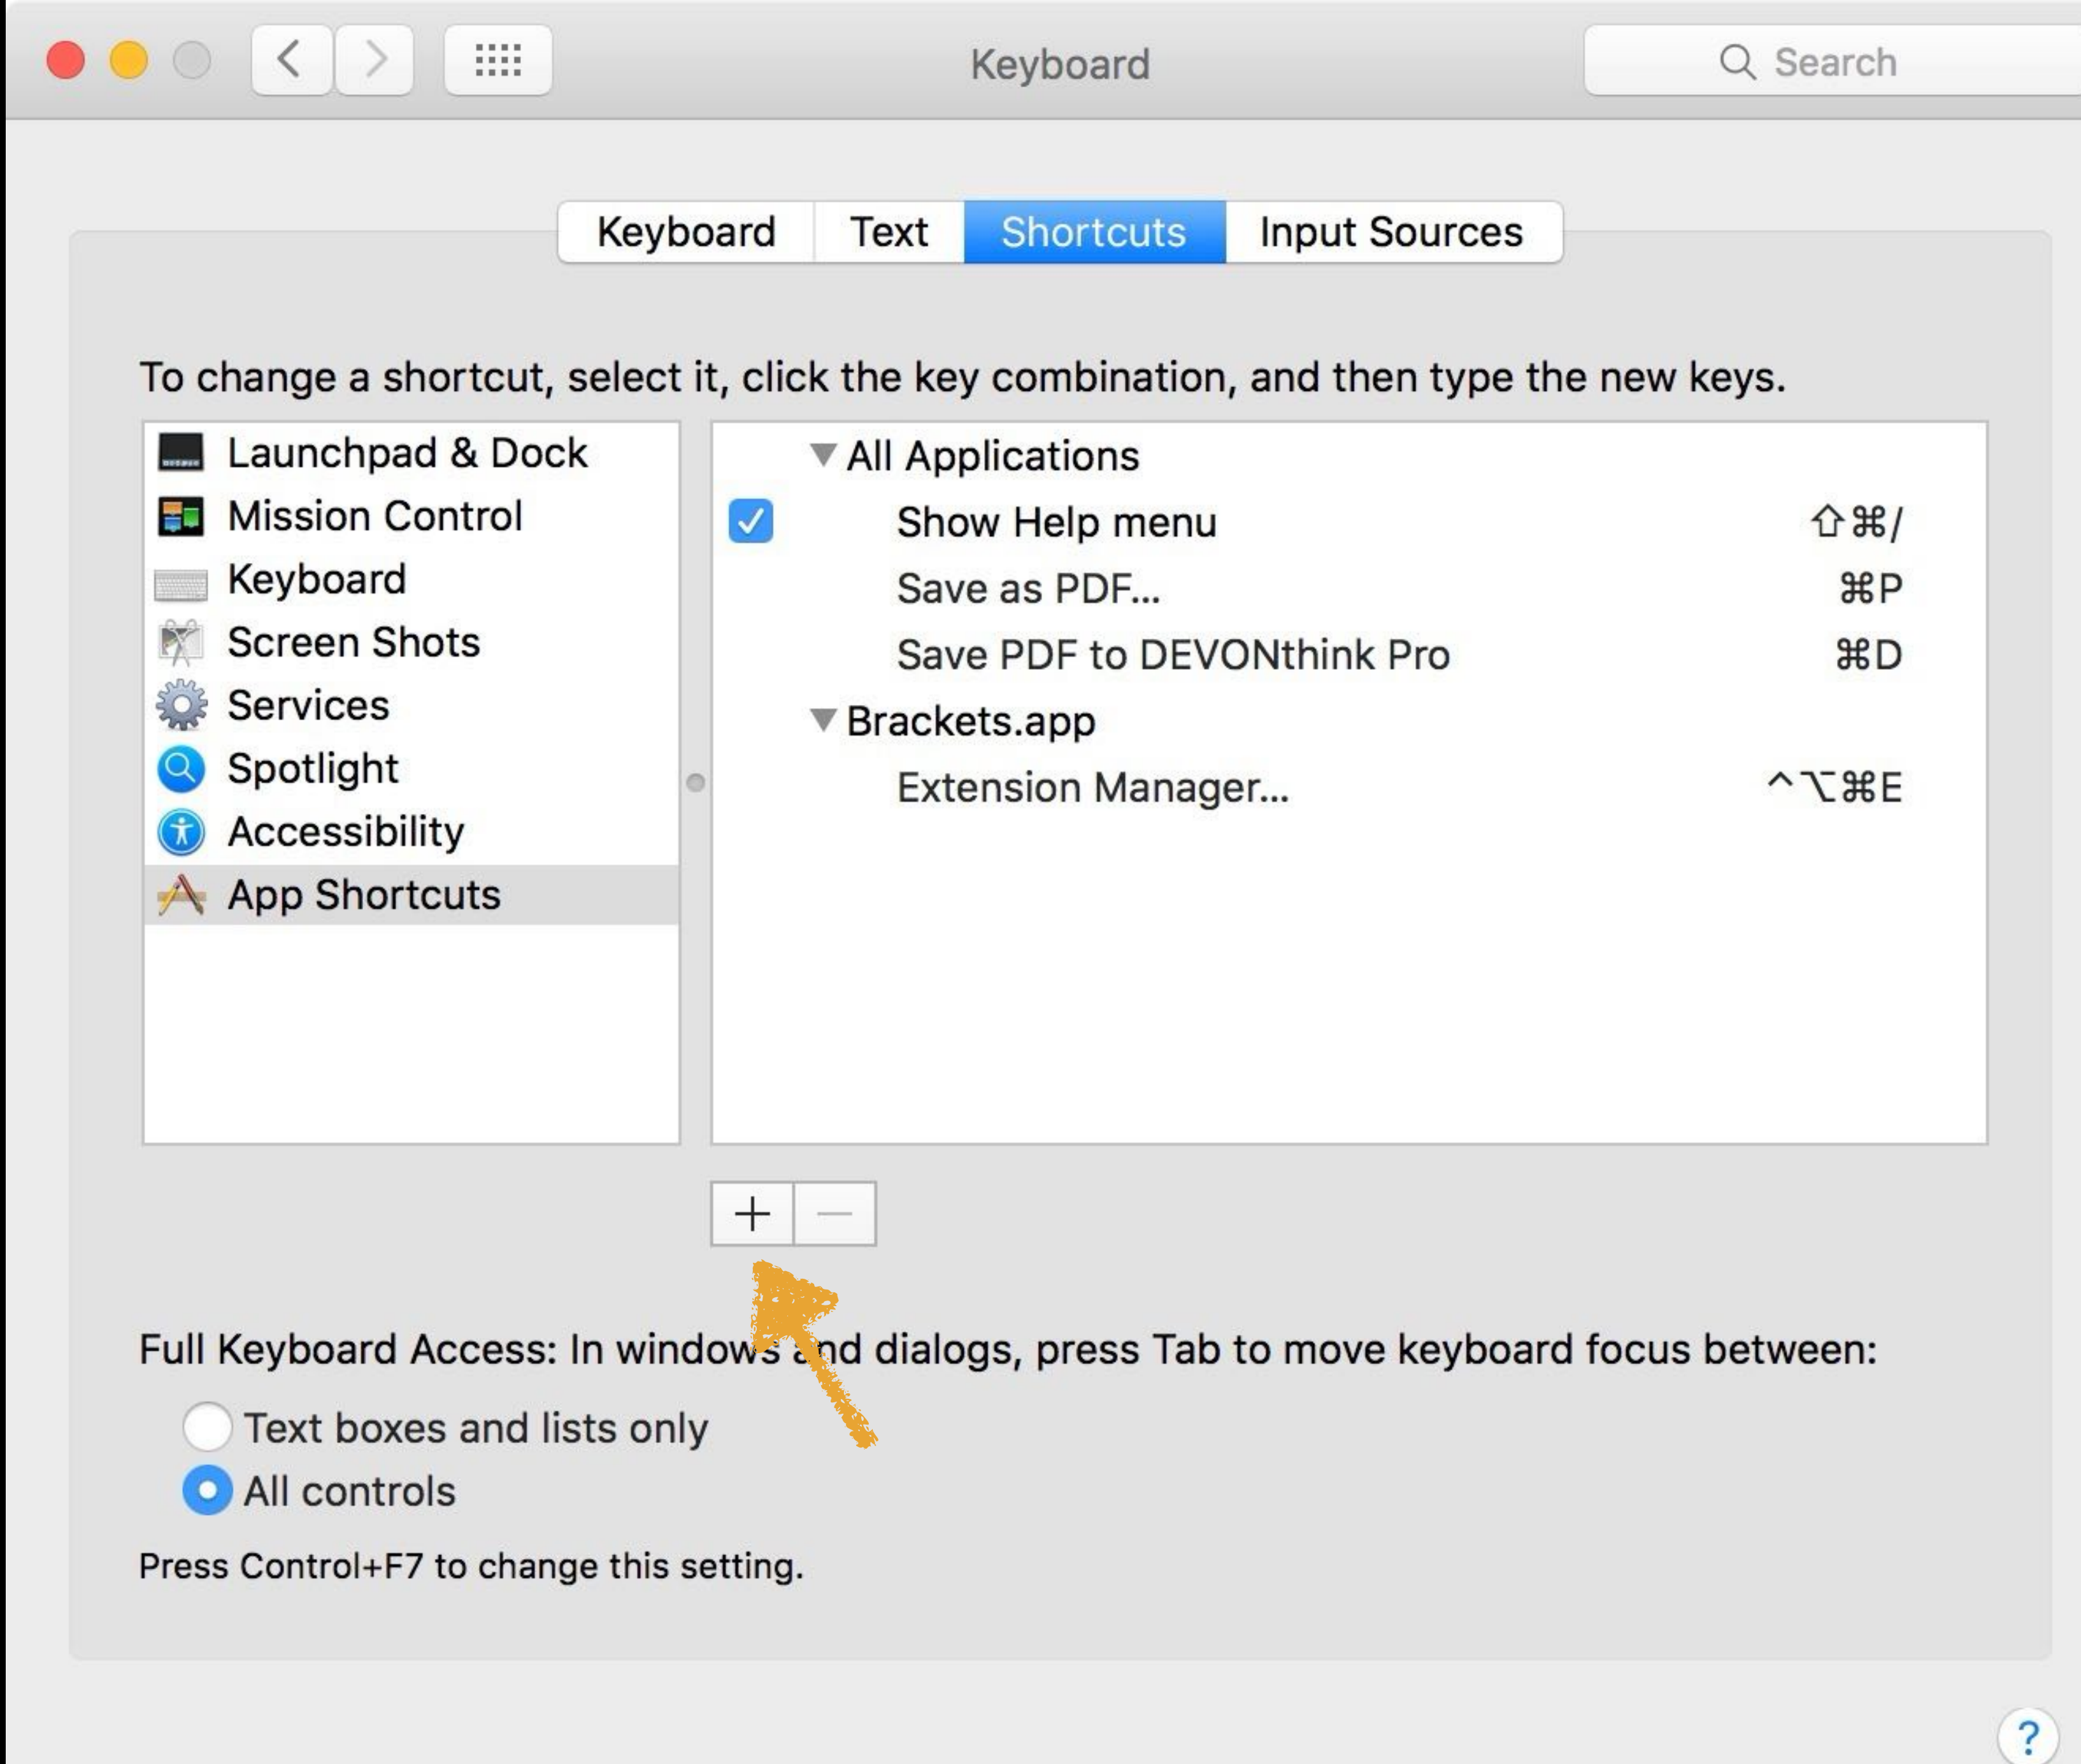

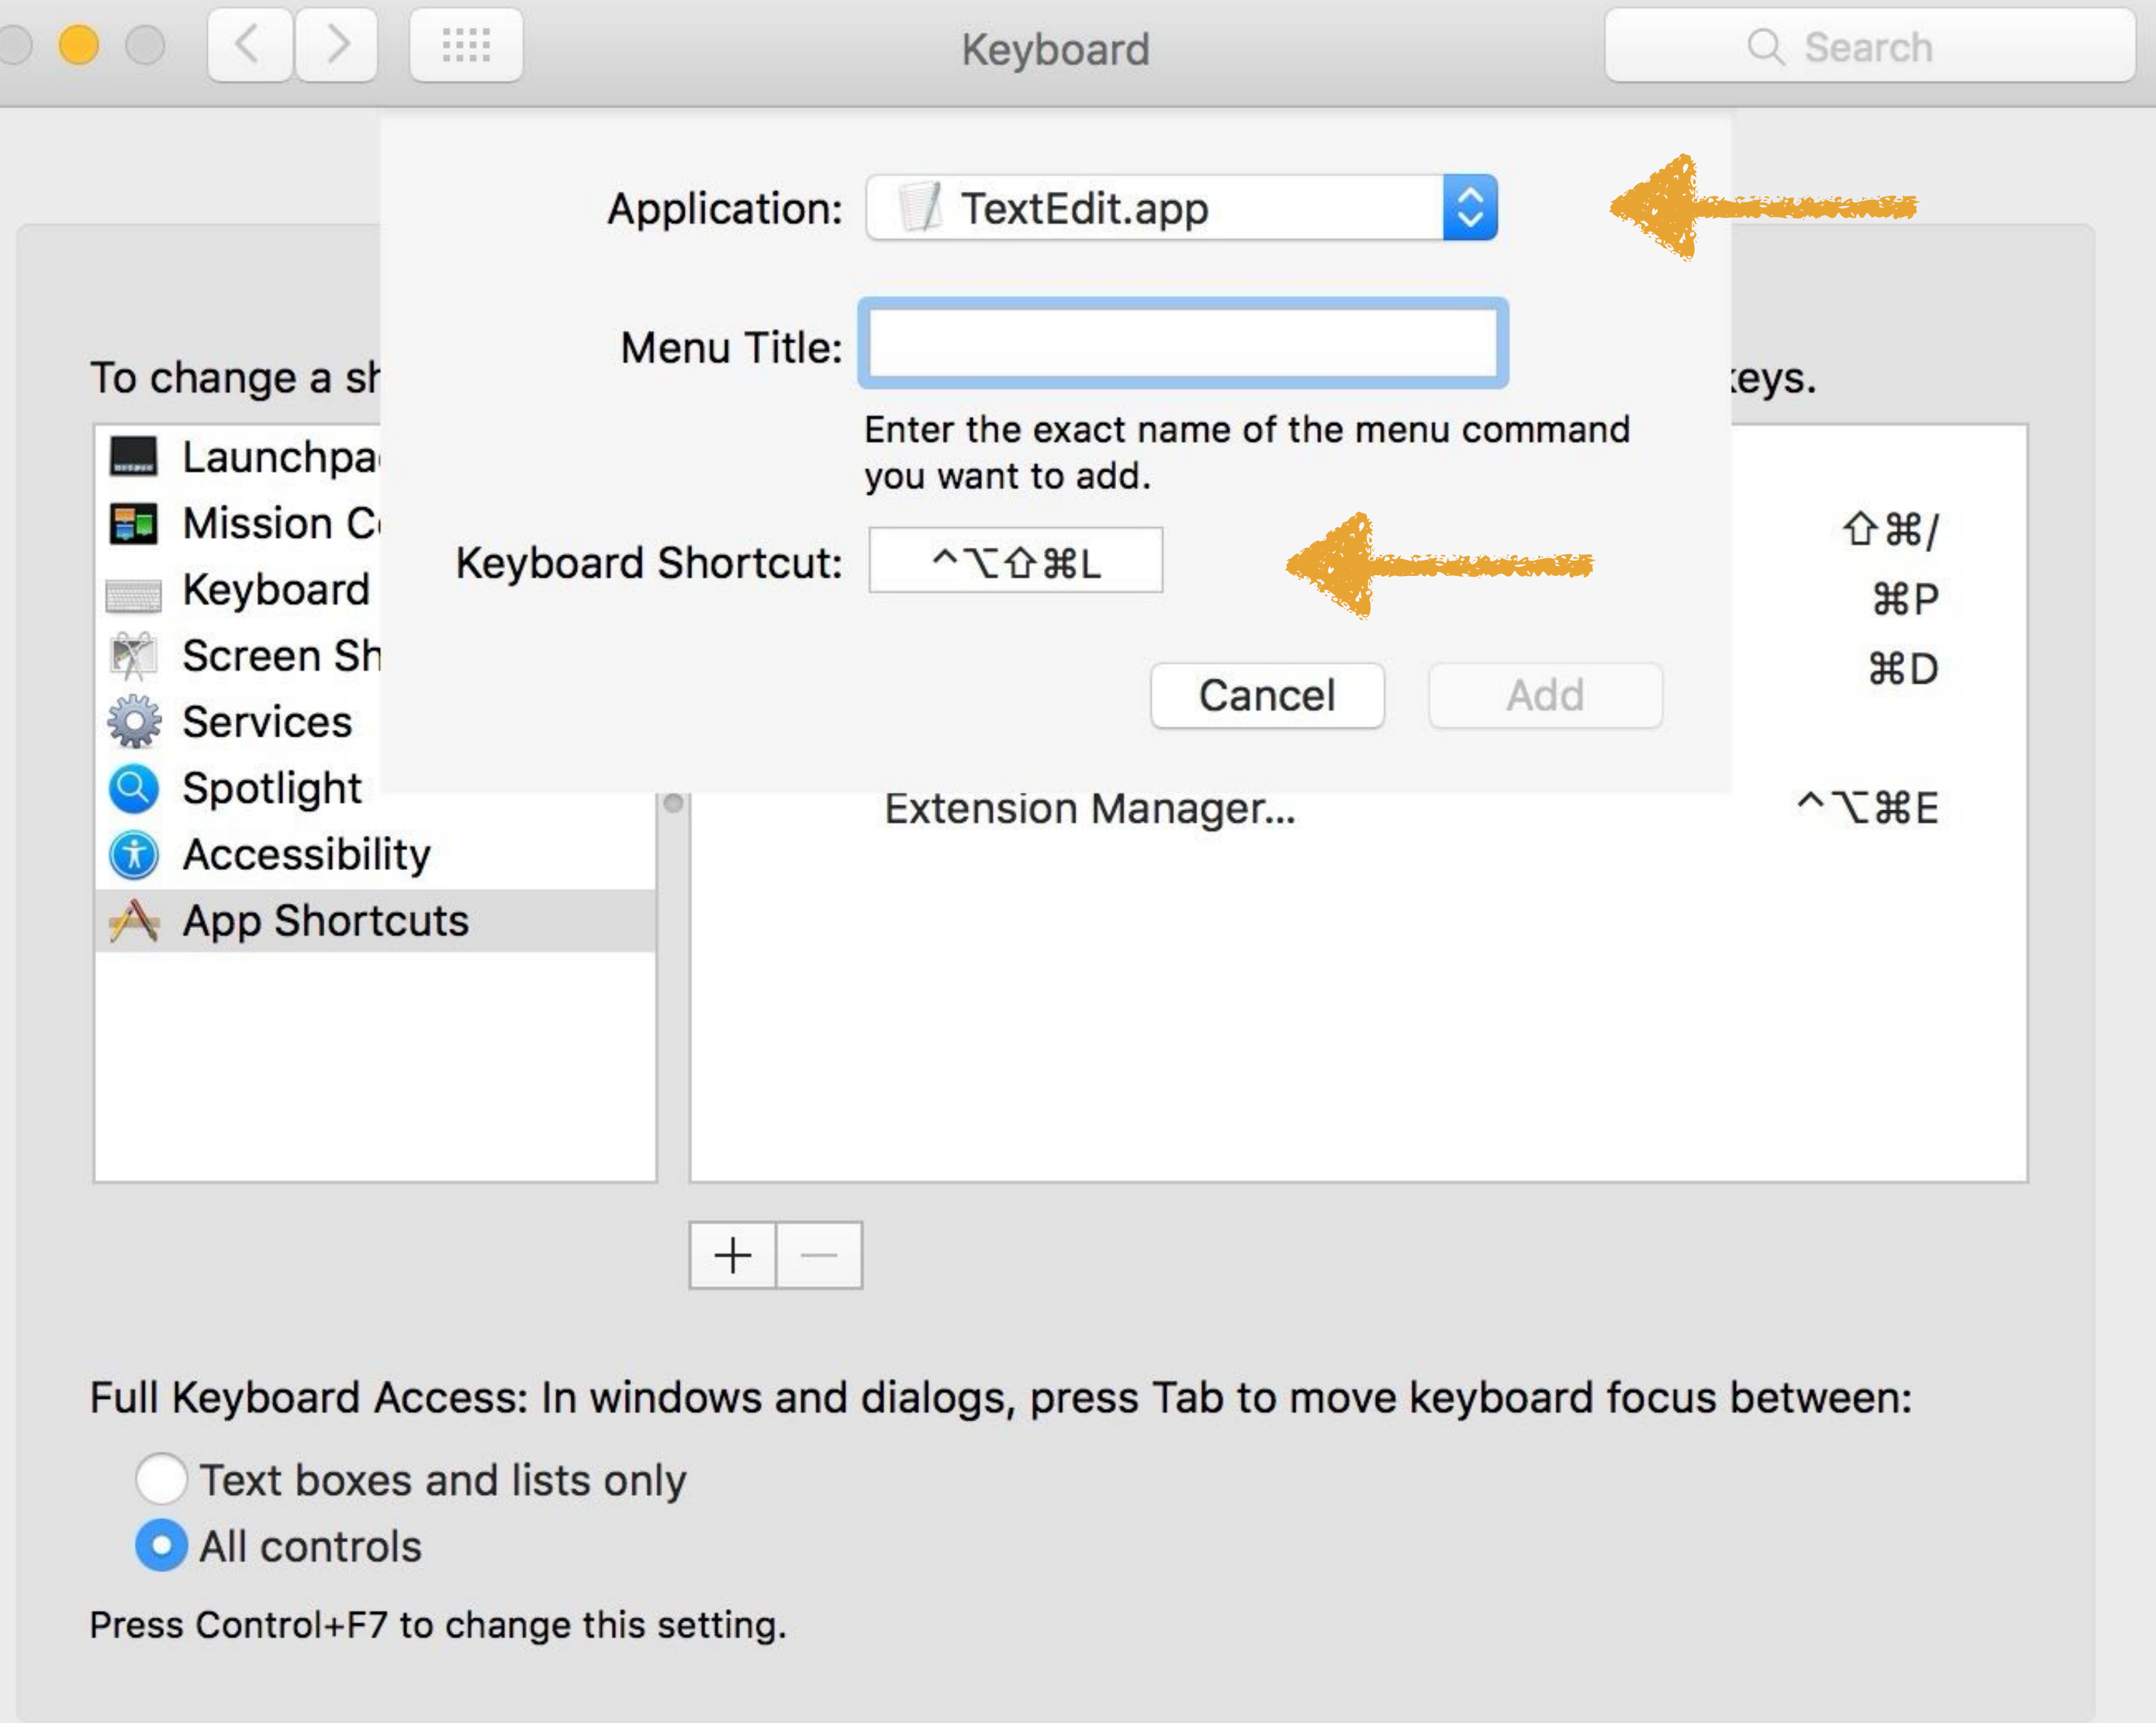

If you want more power to remap keys, then investigate
Karabiner-Elements

`karabiner-elements.pqrs.org`

Free, but donations appreciated

📝 SIDE NOTE

For Windows users, the closest equivalent is SharpKeys

`github.com/randyrants/sharpkeys`

Free & open source, but donations appreciated

Keyboard Maestro

Create keyboard macro shortcuts that can automate just about anything

Launch apps • Click the mouse anywhere • Execute scripts • Insert text • Position windows • Flow control with loops & conditionals • Press buttons • Select menus • Open files & URLs • Move, copy, rename, & trash files • Create & work with unlimited clipboards • Save & paste clipboard history • Control iTunes • Display notifications • Find & manipulate images • Switch between apps

Trigger macros based on almost anything

Hot keys • Click on macro palette • Status menulet • Typed strings • When an app launches, quits, activates, or deactivates • System clipboard changes • Keyboard Maestro engine launches • Window changes focus • Log in to your Mac • Hard drive is mounted or unmounted • Periodically while logged in • System goes to or wakes from sleep • Time of day • USB device is attached or detached • Connects to, or disconnects from a wireless network • Triggered from iPhone, iPad, or iPod Touch • Scripts

One of the most complex but also most powerful apps
you can use on your Mac

Select menus

Keyboard Maestro 7
CONDUCT YOUR MAC LIKE A PRO!

Triggers

- <u>Macros</u> can be triggered by one or more <u>Macro Triggers</u> using any number of the following:
  - <u>Hot Key trigger</u> – when you press, hold, release or multi-tap a key.
  - <u>Macro Palette trigger</u> – with a click on a context sensitive <u>Macro Palette</u>.
  - <u>Status Menu trigger</u> – by selecting from a global system status menu.
  - <u>Typed String trigger</u> – type a string of keys.
  - <u>Application trigger</u> – on launch, quit, activate, deactivate, or periodically while an application is running active.
  - <u>Clipboard trigger</u> – when the system clipboard changes.
  - <u>Engine Launch trigger</u> – when the Keyboard Maestro engine launches.
  - <u>Focussed Window trigger</u> – when the front/focussed window changes.
  - <u>Login trigger</u> – when you log in to your Mac.
  - <u>MIDI trigger</u> – when a MIDI note is pressed or released.
  - <u>Mounted Volume trigger</u> – when a volume is mounted or unmounted.
  - <u>Periodic trigger</u> – periodically while logged in.
  - <u>Public Web trigger</u> – over the Internet, explicitly to the public, or via authenticated log in.
  - <u>Sleep trigger</u> – when the system goes to sleep.
  - <u>Time trigger</u> – at a particular time of day.
  - <u>USB Device Key trigger</u> – when you press, hold, release or multi-tap any HID (Human Interface Device) device key.
  - <u>USB Device trigger</u> – when a USB device is attached or detached.
  - <u>Wake trigger</u> – when the system wakes from sleep.
  - <u>Wireless Network trigger</u> – when your Mac connects or disconnects to/from a wireless network.
  - <u>iPhone trigger</u> – from your iPhone, iPod touch or iPad.
  - <u>Script trigger</u> – from an AppleScript or other script.

Getting More From Your Mac

Automation

R. Scott Granneman & Jans Carton

Changelog

2025-07-09 2.2: Updated theme to Granneman 1.14; minor fixes & corrections

2022-01-20 2.1: Added Windows equivalents: SharpKeys & AutoHotKey; deprecated Karabiner-Elements in favor of much simpler Hyperkey app;

2021-03-31 2.0: Created presentation using slides from the original Getting More From Your Mac

Changelog

2021-03-23 1.8: Added how to copy & move files in Finder with key commands; added *Installing Software* section

2020-06-23 1.7: Added section *Get Info, Get Summary Info, & Show Inspector*; add info re: macOS 11 Big Sur; added slide listing all Apple operating systems

2019-08-16 1.6: Added Catalina for 10.15; added note that --- is not an em dash

Changelog

2017-09-20 1.5: Combined naming charts in *History*; fixed minor formatting issues; added Thank You, Scott (⌘⇧/) to *Basic Key Commands*; added Terminal commands for disclosure buttons; added Show the Finder location of a file from a dialog box; added screenshot of Finder sidebar; added command for QuickLook slideshow; added Special Info in Finder; updated Mac prices for 2019; fixed QuickLook slides

Changelog

2018-08-19 1.4: Added *File Info & Actions* section under Finder with Contextual Menus, Get Info, & Inspector; added HoudahSpot under Spotlight; added commands to open all disclosure boxes & Show Details for printing; added *File Management* section with New Folder with Selection; applied Granneman 1.4 theme; fixed minor formatting issues; added Sidebar under Components; more info on built-in security; added ⌘^D in addition to triple-click for data detectors

Changelog

2017-09-06 1.3: Fixed formatting; in *History* & added High Sierra; in *Key Commands*, added Alfred for clipboard; added slides re: holding down ⌥ in *Open & Save*; made deleting clearer in *Movement*; added slide about drop shadows in screenshots; added huge amount about Path Finder; added slides re: Finder renaming files; added lots of examples of Spotlight searches (RIP David Bowie); added New File Menu; added `duration:`, `date:`, & much more to Spotlight

Changelog

2016-10-11 1.2: Changed Lazy is Good image; spread Automation throughout the deck; renamed *Things You're Not Doing Right* to *Finder* & added lots more; added *Spotlight* section; changed *menulets* to *status menus*; added *Quick Look*

2016-10-07 1.1: Changed theme; fixed formatting; added & changed a lot; new stuff on Finder, Printing, Key Commands, System Preferences, Tabs; added *Computer Rules* section; lots of fixes

2016-03-13 1.0: First version

TODO

Add AppleScript & Automator & Shortcuts
