Browser Basics

Rendering Engines

Rendering Engine (AKA Layout Engine or Web Browser Engine)

Combines HTML, CSS, & JavaScript into formatted webpages in the viewport of a web browser (or other programs, like email)

January 2020-Now

Rendering Engine	Name	Browser
	Trident	
	EdgeHTML	
Gecko	Gecko	
	WebKit	
<bli><bli> k></bli></bli>	Blink	

March 9, 2021: Edge Legacy no longer receives security updates

August 17, 2021: Microsoft 365 apps & services no longer supports IE 11

June 15, 2022: Microsoft ends support for IE desktop app on Windows 10

Chromium is an open source browser, overseen by Google, that uses the Blink rendering engine

About every 6 weeks, Google takes Chromium, adds Google (spying) stuff to it & other non-open source code, & releases it as Chrome

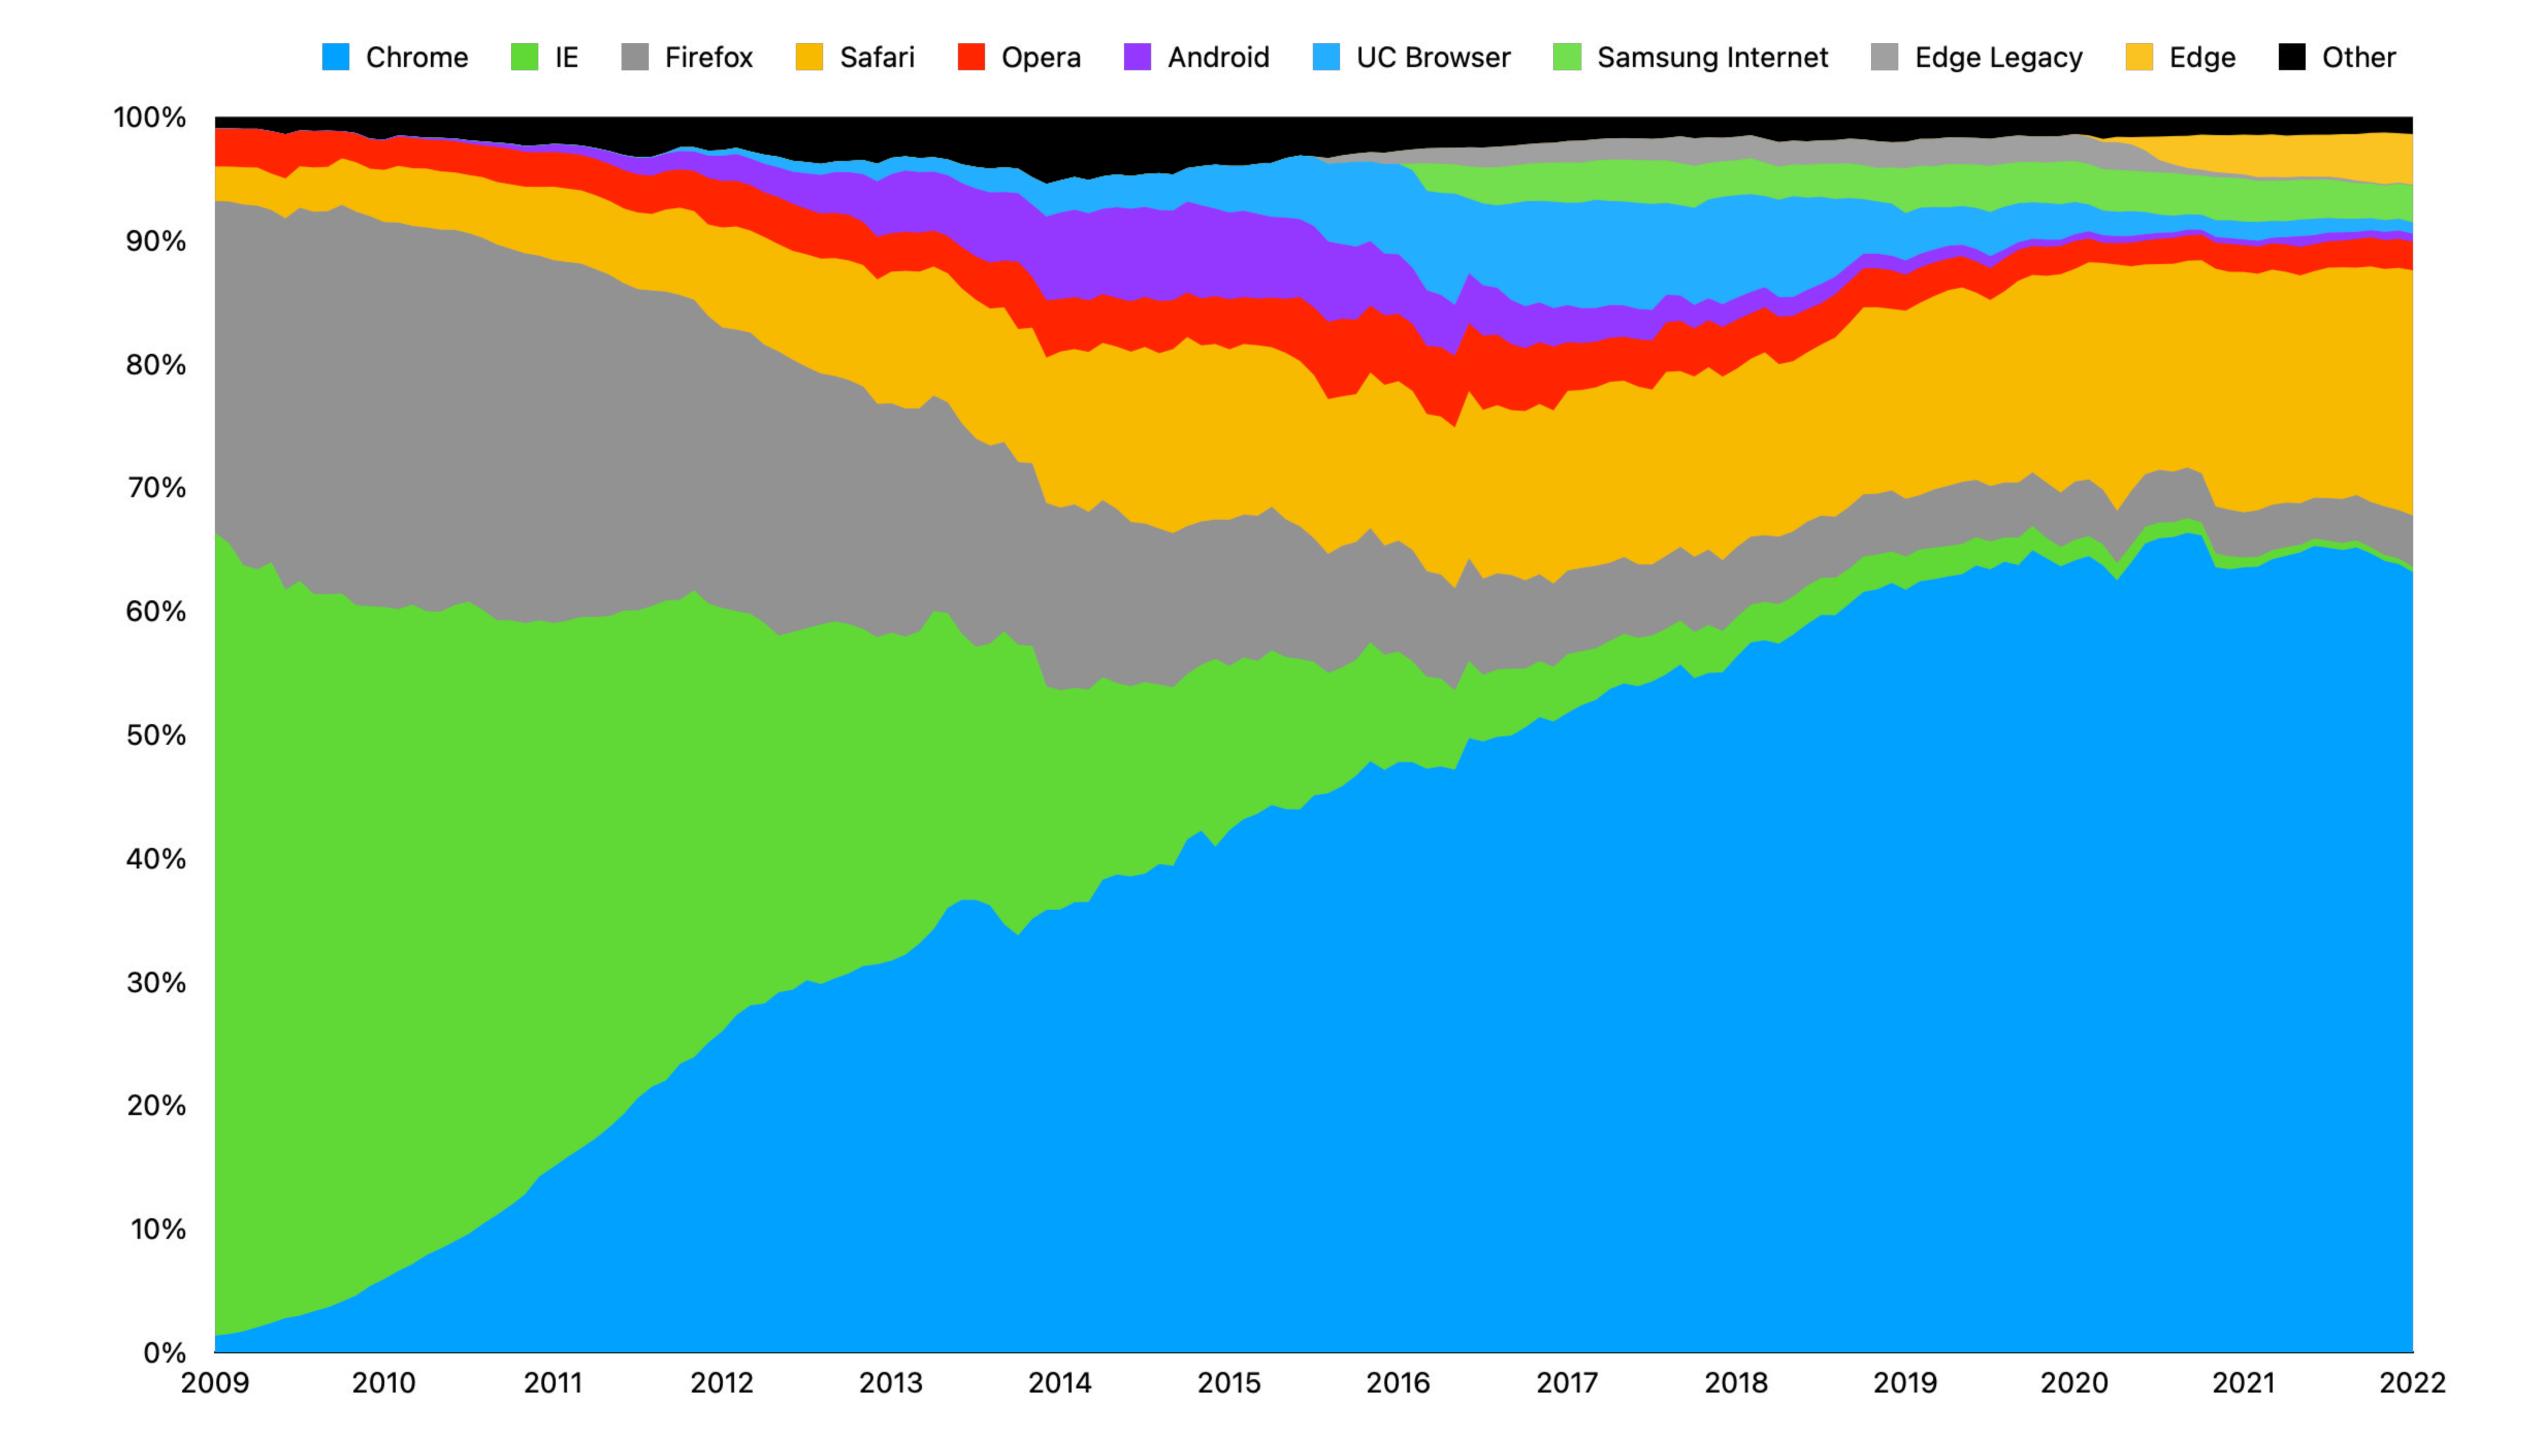

Other browsers besides Chrome, Opera, & Edge are also based on Chromium

Amazon Silk • Blisk • Brave • Comodo Dragon • Côc

Côc • Epic • Falkon • Qihoo 360 Secure Browser •

SalamWeb • Samsung Internet • Sleipnir • Slimjet •

Torch • UC Browser • Vivaldi • Yandex

Choices

Braves Settings

All screenshots, unless otherwise indicated, are using Brave 1.41.06 running on macOS 12.5 Monterey

Brave is based on Chromium, but there are substantial differences

Deviations from Chromium (features we disable or remove)

Linh edited this page on Jan 21 · 74 revisions

NOTE: this page is a work in progress! It should by no means be considered a "final" or exhaustive list of things we have removed.

- How it works
- What Chromium features are removed for privacy/security reasons?
 - Services & Features We Disable Entirely
 - Services We Proxy Through Brave Servers
 - Modified Features and Functionality
- How does Brave compare to ungoogled-chromium?

Brave for desktop is built on top of the open-source Chromium project. We add features on top

Settings 1: Get started

Create multiple profiles, with separate extensions, logins, cookies, & more

Who's using Brave?

With Brave profiles you can separate all your Brave stuff. Create profiles for friends and family, or split between work and fun.

(disambiguation).

Alfred E. Neuman is the fictitious mascot and cover boy of the American humor magazine *Mad*. The character's distinct smiling face, parted red hair, gap-tooth smile, freckles, protruding nose, and scrawny body, actually first emerged in U.S. iconography decades prior to his association with the magazine, appearing in late nineteenth-century advertisements for painless dentistry—the origin of his "What, me worry?" motto. However, he actually first appeared in advertisements for an 1894 play, called "The New Boy", which

Analysis: Biden's Mideast Trip Is Fraught With Political Perils

- President Biden is visiting the Middle
 East to try to curb Iran's nuclear
 program, speed up the oil flow to the
 U.S. and reshape relations with Saudi
 Arabia.
- The efforts pose challenges: Mr. Biden is returning to the region for the first time in six years with far less leverage than he would like to shape events.

Fingerprinting Protections

pes edited this page on Sep 30, 2021 · 21 revisions

What is Fingerprinting Protection?

Fingerprinting Protection is a privacy feature that makes it harder for sites to track you while you browse.

Technical details

Brave includes best-effort defense against browser fingerprinting. Broadly speaking, browser fingerprinting is the detection of browser and operating system features that differ between users for the purpose of covertly identifying users and tracking them across the web. Although fingerprinting attacks will always be possible, it is worthwhile for us to make these attacks as slow / costly / difficult as possible.

Brave includes two types of fingerprinting protections (i) blocking removing or modifying APIs

▼ Pages 112 Find a Page... Home Adding a protocol scheme to Brave **Allow Google login Third Parties and Extensions Android Release Checklist** "Brave includes two types of fingerprinting protections, (i) blocking, removing or modifying APIs, to make Brave instances look as similar as possible, and (ii) randomizing values from APIs, to prevent cross session and site linking (e.g. making Brave instances look different to websites each time)."

"Most tools try to make as many browsers look identical as possible ... Brave's system for protecting users against fingerprinting works differently. Instead of trying to make Brave users look identical ..., Brave tries to make you look as different as possible, for each website, for each session. This prevents browsers from identifying you when you visit other sites, or when you return to the same site in the future."

How to test Brave's fingerprinting protection

- 1. Visit audiofingerprint.openwpm.com Or browserleaks.com/canvas
- 2. Note the fingerprinted values
- 3. Reload the browser after clearing storage, either by deleting all browser data or opening a new private window
- 4. Note the same fingerprint is assigned, despite all storage, cookies, etc being cleared.

"Auto Tab Discard" automatically discards inactive tabs after a defined time period to free up memory usage of the tab and to prevent background scripts from using the computational power of your browser when the tab is not being used by the user. This extension uses the native method to discard tabs and hence does not have issues the other similar extensions might suffer from. Also in this method, the discarded tabs will not use any memory at all and will restore to the previous state while preserving page state (like scroll position for instance).

Features

- Discards inactive tabs after a specified time period
- Discards all tabs or tabs in the current window per user action
- Supports white-listing for hostnames that should not go to the discarded state
- Supports conditional options to prevent tab discarding (pinned tab, media playing, and power connection)
- Load requested features from GitHub

Discarding options	
Discard inactive tabs after 10 minutes (zero to disable) when the number of inactive tabs exceeds 6	
Maximum number of tabs to check for discarding per single automatic discarding request 50	
Only discard the following inactive hostnames or regular expression rules ¹	
Comma-separated list of hostnames	
✓ Display discarding items in the "tab" context menu (if supported)	
☐ Display discarding items in the "page" context menu	
✓ Display "Open in New Discarded Tab" item in the "link" context menu	
☐ Change favicon of discarded tabs (if possible)	
Prepend a symbol to the discarded tabs (e.g. ₂²² or ﻙ) (if possible)	
☐ Discard all unpinned tabs on a browser or extension startup	
☐ Discard all pinned tabs on a browser or extension startup	
☐ Release discarding state of all pinned tabs on a browser or extension startup	
Discard a background tab if its memory usage (totalJSHeapSize) exceeds (in MB) ²	60
Delay for painting the discarded favicon (in milliseconds)	100
Number of allowed simultaneous discarding jobs	10
Inactive interval to determine if the computer is in idle state or not (in minutes)	5
Discarding conditions	
✓ Do not discard a tab when media is playing	
☐ Do not discard a tab when it is pinned	
Do not discard a tab when form changes are not yet submitted

Welcome

Hi there! During this session, Cookie AutoDelete has deleted 63 cookies and in total 69232 cookies.

Documentation

Frequently Asked Questions, Common issues and solutions

Thanks for trying out Cookie AutoDelete. If you liked it, then please give a review.

Release Notes

3.8.1

• Fixed: Browser detection in Firefox 103+ as the previous browser feature has been deprecated and removed. Fixes #1409 via PR #1410.

3.8.0

- Added: Option to keep or clean existing site data on new enables.
- Fixed: Site Data being cleaned up despite a whitelist entry on restart. Closes #1395 via PR #1397
- Fixed: SessionStorage data in Firefox wasn't being cleaned when manual clean 'All' was triggered. Closes #1402 via PR#1404

3.7.0

- Enhanced: Additional Clean options now have small amount of spacing between them.
- Chore: Dependency Updates and code optimizations, including a patch for replacing deprecated functions by CommanderRoot in PR#1319
- Fixed: Cleanup of site data on restart. Closes #1199 via PR#1386.
- Fixed: Keep All Cookies value not properly kept on import. Closes #1376 via PR#1389.
- Fixed: Version number comparison in Firefox is now by number instead of string, as it should have been in the beginning. This resolves most of the issues from Firefox 100+

IPFS

Method to resolve IPFS resources

Learn more about Brave local IPFS node and gateway privacy considerations.

IPFS public gateway address

https://dweb.link

IPFS public gateway fallback

Automatically fall back to public IPFS gateway if your Brave local IPFS node cannot be reached.

Redirect IPFS resources to the configured IPFS gateway

Automatically uses the configured gateway for IPFS resolutions when an IPFS gateway resource is encountered.

Automatically redirect to IPFS pages via DNSLink when possible

Automatically uses DNSLink to navigate to an IPFS version of a website when possible Learn more

IPFS Companion

Uses the IPFS Companion extension for enhanced IPFS support in Brave, including access to common IPFS tasks from your browser bar.

Maximum IPFS cache size (GB)

How does IPFS Impact my Privacy?

The InterPlanetary File System (IPFS) is a protocol enabling a globally distributed, peer-to-peer network for storing and accessing files, websites, applications and data. IPFS uses content addressing, rather than traditional location-based addressing, to uniquely identify each file in a global namespace connecting every computing device that participates in the network.

As a Brave user, you can become part of the IPFS network by installing and starting an IPFS node within the Brave browser itself. This means that when Brave detects IPFS-hosted resources, it will automatically use your browser's IPFS node to retrieve them. Because IPFS is a public, peer-to-peer network, when you enable IPFS support in Brave, you should be aware of the following privacy considerations:

- 1. When your device accesses content over IPFS, it also temporarily becomes a host for the content until your node's local cache is cleared (this amount of time can vary, but the cache is checked hourly and will clear if it reaches 90% of its default 1GB limit). This means that if you visit a page over IPFS, you agree to temporarily be a host of any IPFS resources that it loads.
- 2. Every IPFS node on the network has a unique public identifier, known as a PeerID. Since PeerIDs are long-lived identities, it's possible for someone to look up your PeerID in the distributed hash table (DHT) that stores public IPFS metadata and track your IP address over time.
- 3. Similarly, because that DHT also contains metadata about the content that is requested or provided by PeerIDs, it's possible for someone observing the DHT to learn what content your node (and, potentially, your IP address) is requesting from or providing to the rest of the IPFS network.

Working Towards the Greater Good

WebSanity was formed around a pretty simple idea, really. We wanted to do work that makes the world a better place. A big part of that is making sure that WebSanity is an ethically run business. This isn't about building and selling a company, having lots of employees, making lots of money — it's about doing what we love to do, working with organizations that are making a difference in the world.

From our Core Values, our Mission is to:

Provide effective, affordable and ethical Web consulting and development to mission-driven organizations.
