Backgrounds

Backgrounds are complex

Lots of properties

Can be *layered*: multiple background layers

Difficult concepts

background-image

background-position

background-size

background-repeat

background-attachment

background-origin

background-clip

background-color

background

background-clip

Specifies whether an *element's background* extends to the outer edge of the content, padding, or border of the box model

Values

- » border-box (default)
- » padding-box
- » content-box

background-clip

9

3

1

4

4.1

6.1

content-box

9

3

1

4

4.1

6.1

background-color

Sets the *background color* of an element using <color>

background-image

*Sets 1 or more background images for an element
using <image> data type*

```
background-image: url(http://www.foo.com/  
bar.png)
```

```
background-image: url(data:image/gif;base64,  
R0lGODlhEAAQAMQAAORHHOVSKu...)
```

```
background-image: linear-gradient(180deg, red,  
blue)
```

<image>

A 2D image, either static or dynamically generated

2 kinds of <image>s in CSS

- » *static*: referenced via a <url> or included via a data URL
- » *dynamically-generated*: e.g., <gradient> (covered later)

<url>

Pointer to a web resource

Expressed in 2 ways:

- » absolute or relative URL
- » data URL

Absolute	<code>http://baz.com/foo.png</code>	Complete URL
Site root-relative	<code>/foo.htm</code> <code>/bar/foo.png</code>	Web server fills in protocol & domain
	<code>foo.png</code>	Same directory
Document-relative	<code>bar/foo.png</code>	Down into sub-directory
	<code>../bar/foo.png</code>	Up into parent directory

Data URL

Resource inlining: instead of referencing an external image (via an absolute or relative URL), you instead embed the images directly into the style sheet

```
background-image: url(data:image/gif;base64,  
R0lGODlhEAAQAMQAAORHHOVSKu...)
```

Why? To save HTTP requests to the web server

The downside: it makes your style sheets bigger

data:image/gif;base64,R0lGODlhMAAwAPf/APbVfbQcv769vje/ /rqtumVI++tWvnkofC0ZvTKZem41/LBQt3d3deVc9WOZ/nhmeqaJfzxyvjcippz8/358fbWqezJtuymLv79/frmpNVsEsNcKftQW/PMqOmVHfTNbO2kSky9LS0u2tNvXh1Nt4Fu7u7vbYgvHx8frorPG6PfG7Me6wLf301fTNUtirlvj4+NeHVvnmquWJGeugJOB8F+qSMvPFX/G9ReykIu+5Zf766uqaHvrkneqdI+uZNuzs7PG7dPnhnfX19erq6v312NXV1fLBTeiLG+ymPvXVtdhzFN12JeSYVe2rNMrKyvrrvdJmEvfaJougIOOGGfrqu8JQEuyiP+uhKPvt3fbTdf323e+1Nfvs1fniwe2lJOubIsRSD+mTHPnevvnqfjdj/fp4vT09Pvp1efn5+Tk5PTJTuLi4vz38vbUeeWGItnZ2fvo0Pngvs5gEfjh1+bm5u2uL+Dg4Nvb2/vsuueEGGOiQHfzy0f316eGDGPzuweylLcxeEfbUgeucJMNWHOqbIPvs/bTY//9+vfXcumXH+iYHvjdjP317P305fvz7u2rMuynL/rps+yeQfjfjeeVHe6pMu+yMe6tJ/ror/njpffadPCyL+mYJOqZIdZvE+2nI+2pJPbUe+yiIeUCH+qYHfjbh+6sJPbYgfvqsfv7++ukK/TNa+mQG+60POGtkuuiIdR5RPzx8pcD83NzfTLj+yjJu6vJe2vTvbPnt2hgvjej/TK1vLFFv3y5/334u6xOPjd1vLYyfTNbvrpsfvqsvjdwvzyzvPd0fc4N+vp5/fUDomZKuykLOKhd/HSu/bavfngoPXRePbRftuRYOCNRvH0tvbRc/fZe+Szm/TMWPG0OPfxeeiLKspiJdF0O+qdMOJ/G9LBueSCHvTHXfLCWOnn5fHFnvrw6868tPbPcfjn2vrn08dchPbQcN+IPumRIOqRHuqSH/TIYu/AleqqNeOogOu9n8hWD++3OPG/eu+0M/nkmOakKe6pM///yH5BAEAAP8ALAAAAAAwADAAAAj/AP8JHEiwoEGBjhwdXMiwocN/vXo9nEjRYBcnTrpU3DhRxwIcojikXOjFDh1GkLyMXCkQEa41RVocwYWB5cgKdjJQoMDPTgWbHCkk0bZ1x44WLpIIAFqx1qUUR4vsyMCifToJjsAdKrI1QoQtLTjU63PVYRAuqX5FkCurwi8y1/SVZdgFC4AifAzpNcSnxFmGuaNJCMWJE8eQgQQFwkRTIEggvKsbWJz59UmFMVK/bnGABbcijjiFPhigpiEVKoXq06tYorFdDUXCkgRK4gIOAN+rICW4RUGYILD55K1qYVXyDAAxEkV4ilDfuM4YVgEjwwXzgtcAGA0oHFpCKL/x8PhcABSgBcLOD0BQy8SQh4eWk0cIyBH/Kw79ueqMyBTFAUQUBKfTwAN0JEjHgQj2kAkBAVaRwnmJqHdJe/H8gMAYAoCQwxoAMNKDDIpJMqEQA+yySxkstuji2UE00MGKUiimAwPMALAGjkYsBQFk0TCTQo4DsCIBKYkaYoE SCq5JJNJQgnlk0wyMsADRC4TCQgUDNTID5a4oUkwJ5SJCiplmnkmmmm2meaZbp4QjCzaWDIJfQT5YoMTWkQjhSiAiukGG4EGSiig gyJaqKCBSHNNZbY4MtBWXTjxDXBCHLNppx2ek0AmwYgqqekChKMO/7YkAVD7LzhhDpSSP/zway01srKrKzkemuttUojxQf+9IOG QyGMY8k8ggyTwLLMNuvss8wOMw05kYwTwkTQhAPLLVzkowIOR5Rzw7jk1ltuOUfgoAIX19wyRTjGVKREDbCcYu+9p2DCwr4sbMMFvyxggu+9U9SgBEcdzABLKAw37PDDEDcMCxUdjEQPFaBkrPHGHHeMRXnsNREJTmUbPLJKKecQyVN2PTOIqPELPPMNNc8igfV2MRE IVP07PPPQAc9BQ9MsNSGBqQkrfTSTDetdBSIrESCBjz4wMPVWGetddafWK3BOitz80khNPBQytlon2122mmTzcMnz6ykwBK eYKGIB3jnrYgPWGD/McgieeuNhSef3LOSMYWA sY oY jDNe9yqrDOID5IM3LoYHq4BRgj0rxVADFoC0IronzURywSBi+OGHGINcEEkznYje ygVY1EDNST/4cUEze0AAiROWQLBHCXPEEsscJfT+e/B7XHCBH7Gs1M4MI1QPjBMQILHELDEII5AwMcyyBBIQOAFM9SNQ4c1Ij4SB hCuujNDJDBpY4QAJBpHggBWfzNDJCPBDghWgsxFk4AMeIyiAH6JghQaYoSFmaIAVouCHAoxgD/jAH0csEA91CAKhNDFIyiCD10Q Igo10MMsLCCSV8whEBt4RRtE0oZXbGAOc8hGQzCgChjAYAhnmAAKjRywgRcowwRIRMEEhjAEHzqRiUJEIhCIQE VzvGADDUCBEpsi A1XUpIdCBEIa1MAAPIjDCCJIowiMgIc7qIEISIwjEdLABgbAQQS0eIIen0ALEaQDDgxgQx2AoMQu8hAGYSSCGthwBwY4Eg+OZEMa 4KjECVjSBGJcpB2NwEkjwAGQbkwDEEwwAUNGZiQBAQA7

base64

Encodes binary file into text

Convert any image format: JPEG, GIF, PNG, SVG

On Mac OS X & Linux

```
$ base64 star.gif
```

On Windows

```
Base64.exe -e star.gif  
(see support.microsoft.com/kb/191239)
```

[address, find IP address of a domain name](#)

[Convert IP address to different formats](#)

[Convert Unicode characters to HTML code numbers and vice versa](#)

4.1

6.1

* Requires vendor prefix

background-origin

Specifies whether the content, padding, or border of the box model is used for *background image positioning*

Values

- » **border-box**
- » **padding-box** (default)
- » **content-box**

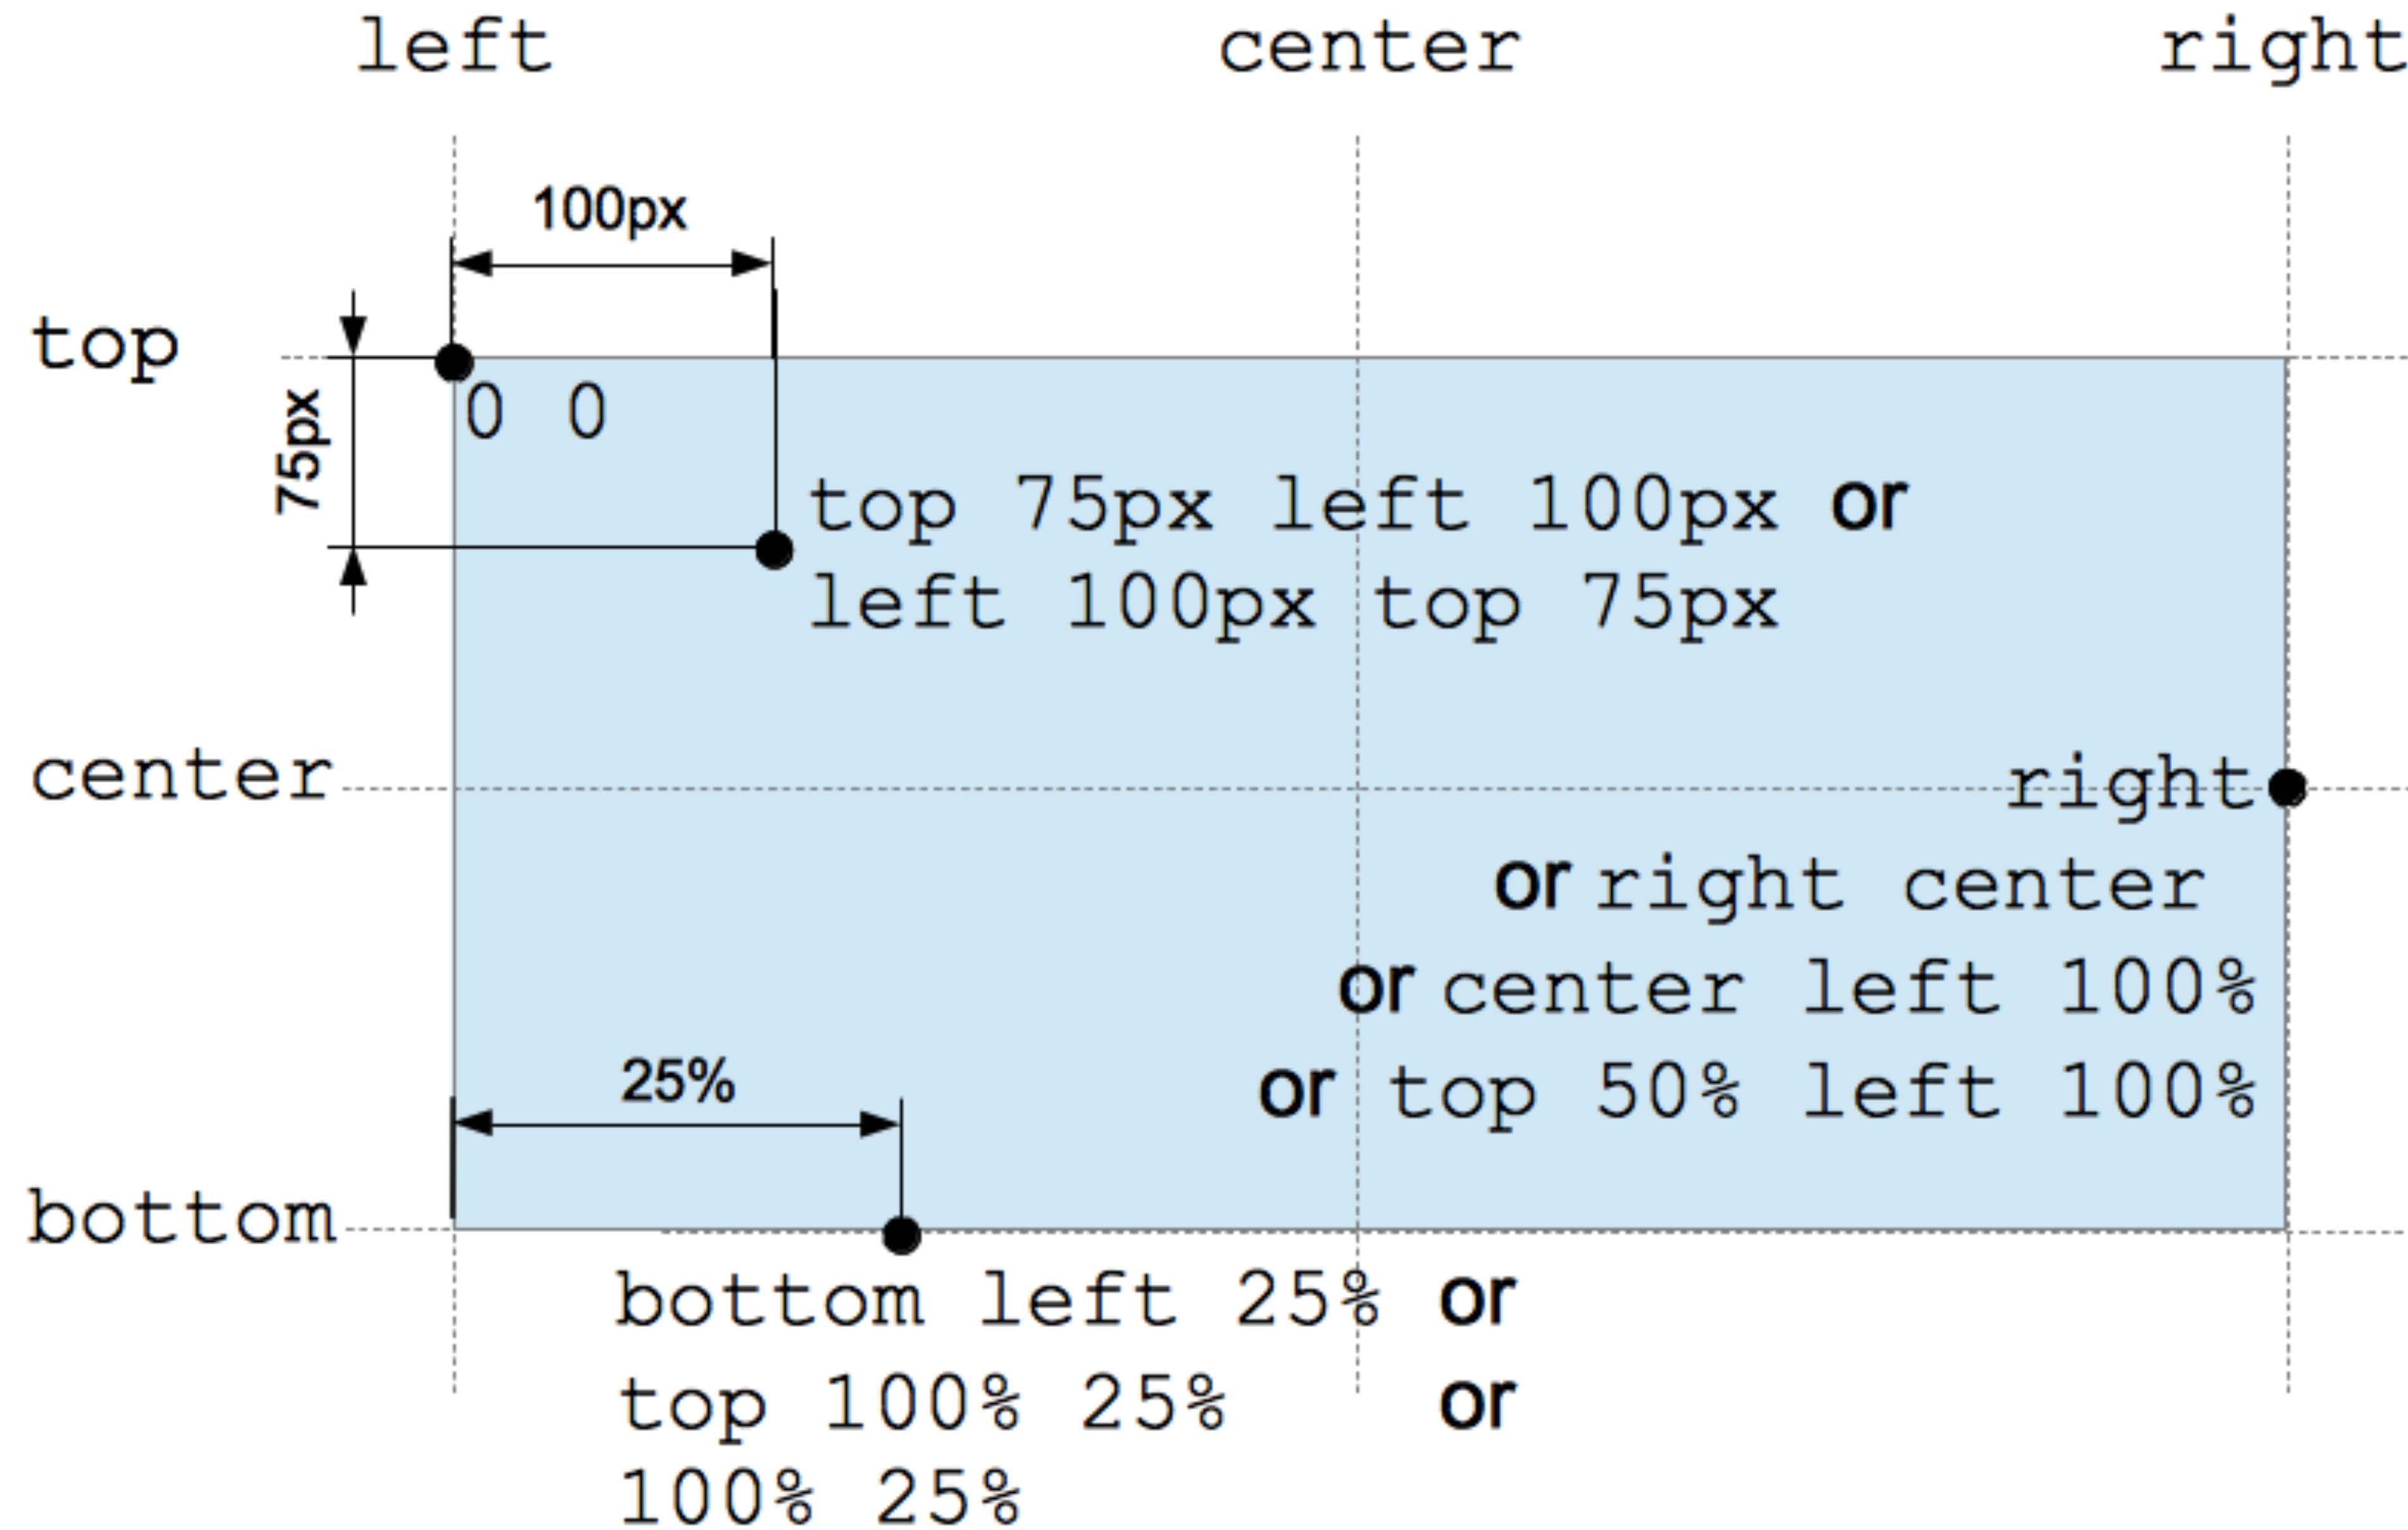

background-origin	9	3	1	4	4.1	6.1
content-box	9	3	1	4	4.1	6.1

background-position

Determines how a background image is *positioned*

Uses the <position> data type

background-position	4	1	1	1	Y	Y
Multiple backgrounds	9	1.3	1	3.6	2.3	6.1
4-value syntax	9	>7	25	13	—	—

background-size

How much the background image is *resized*, if at all

Values

- » **cover**: fills entire box with image
- » **contain**: resizes image to fit in box
- » <**percentage**> (of the size of the box)
- » <**length**>
- » **auto**: don't resize image (default)

`<percentage>`, `<length>`, & `auto` can be specified 1 or 2 times as a value

If you specify 2 values, 1st is used for width & 2nd for height

If you specify only 1 value, it is used for width & the height is implicitly set to `auto`

background-size

8

?

?

background-repeat

Specifies if & how background images are *repeated*

Values

- » **repeat**: repeat in both directions (default)
- » **repeat-x**: repeat horizontally
- » **repeat-y**: repeat vertically
- » **no-repeat**: do not repeat

background-repeat	4	1	1	1	?	?
Multiple backgrounds	9	1.3	1	3.6	?	?

background-attachment

Specifies if & how background images scroll

Values

- » **scroll**: scrolls with the page (default)
- » **fixed**: fixed within the viewport & does not scroll
- » **local**: scrolls with the content of its container

background-
attachment

4	1	1	1	2.1	3.2
---	---	---	---	-----	-----

Multiple
backgrounds

9	1.3	1	3.6	2.1	3.2
---	-----	---	-----	-----	-----

local

9	5	4	25	?	?
---	---	---	----	---	---

background

Shorthand for combining other background properties

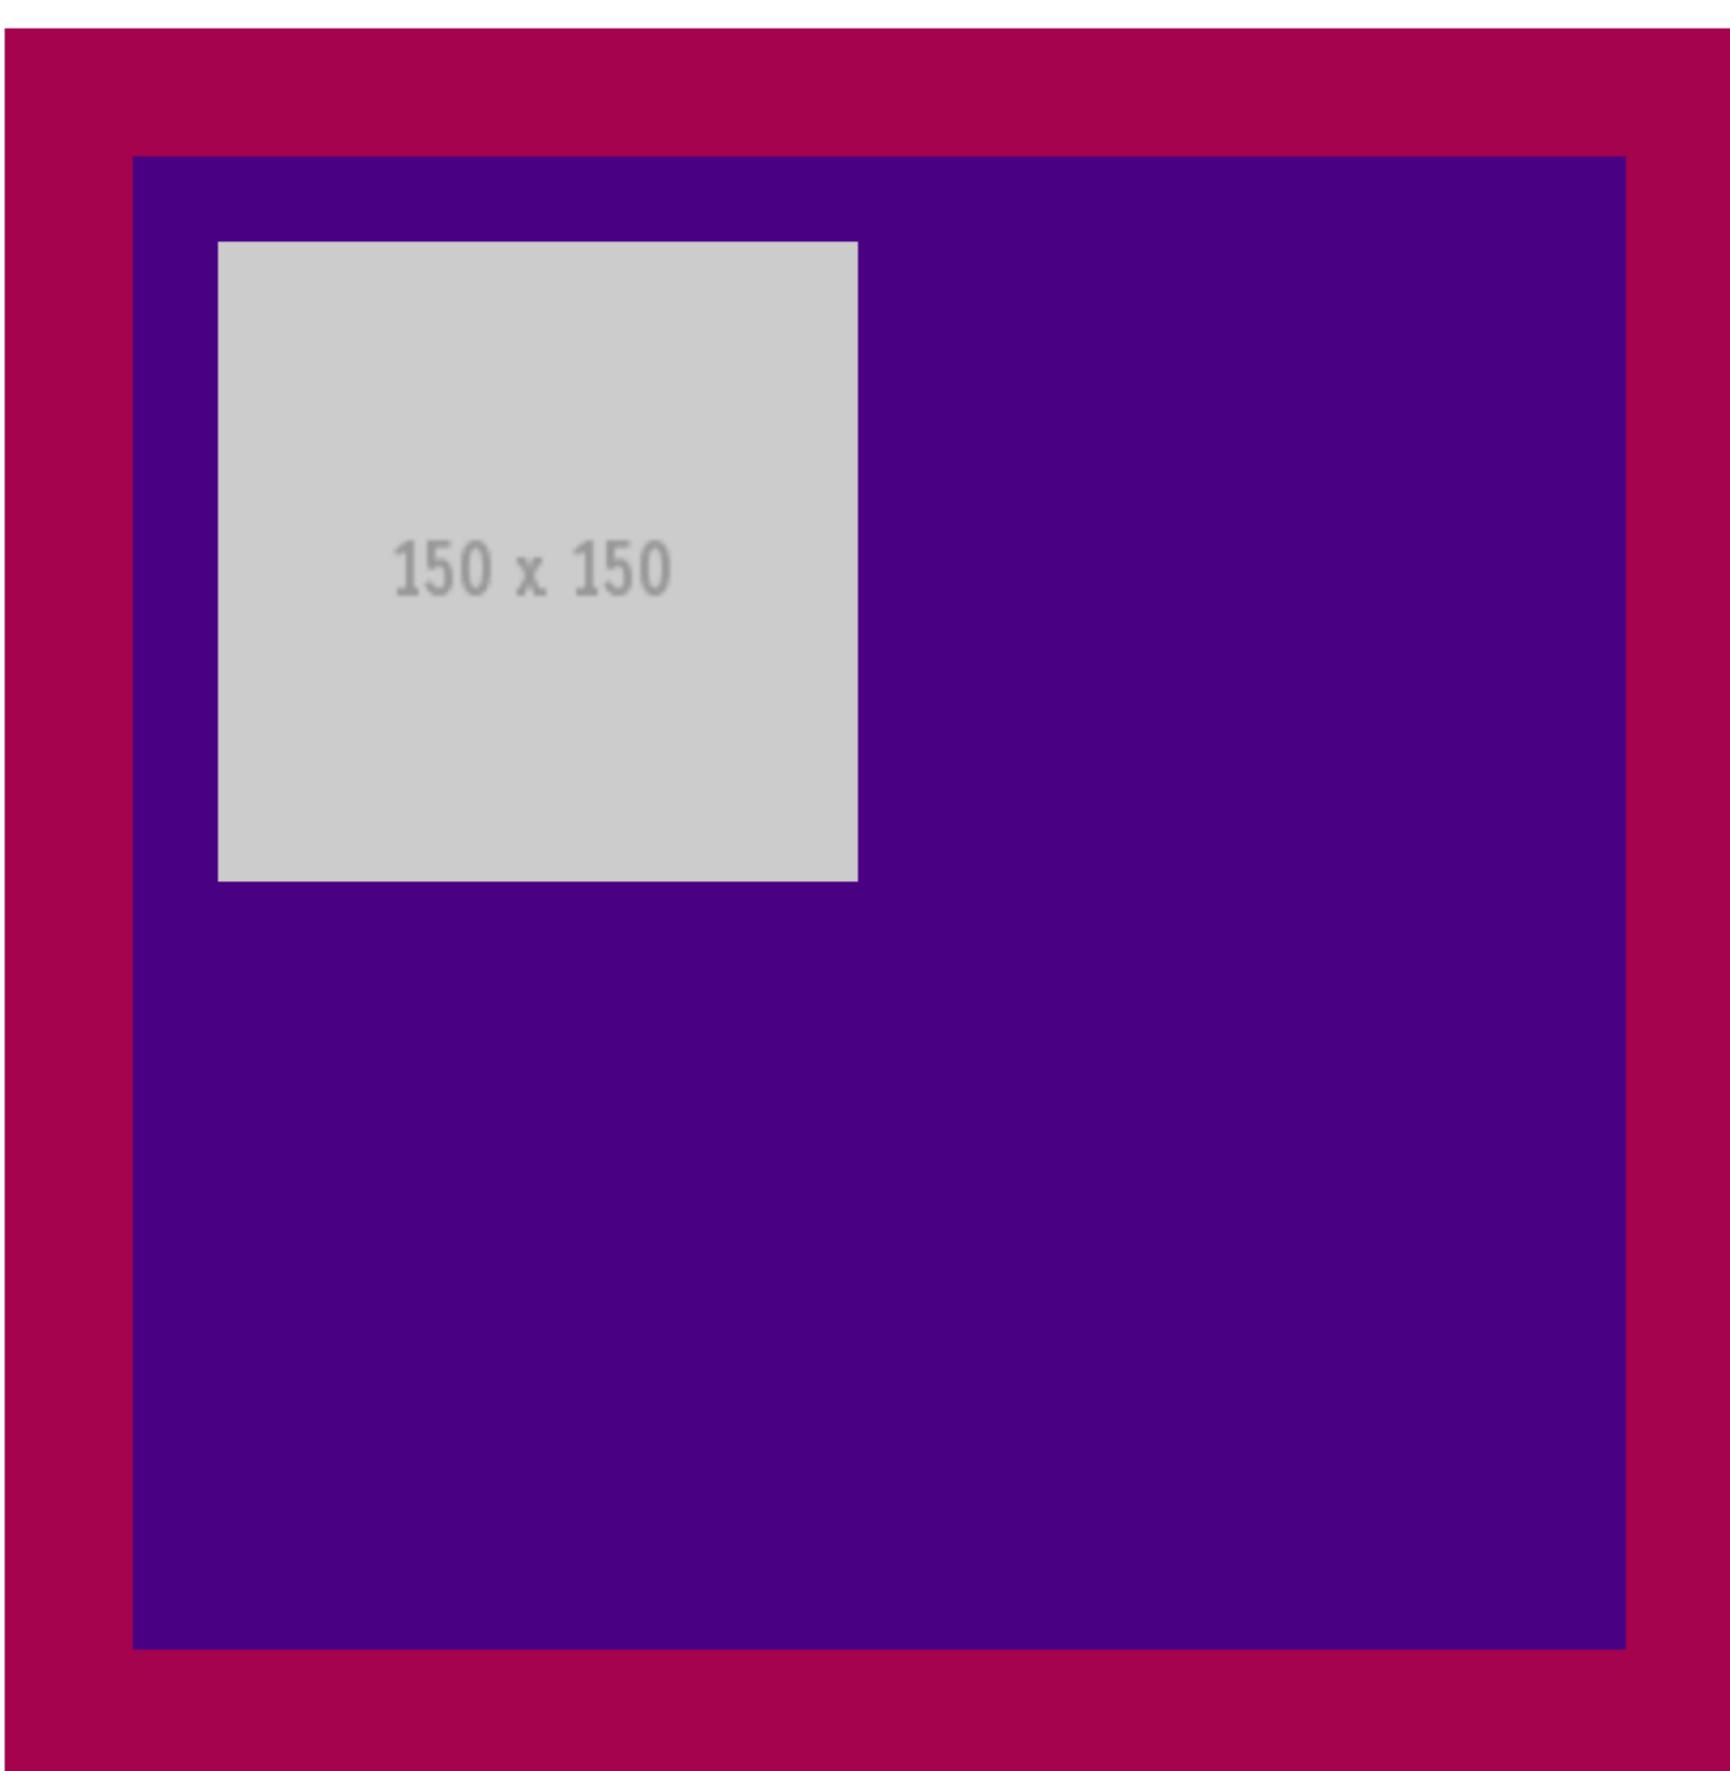

background: background-image background-position/background-size background-repeat
background-attachment background-origin
background-clip background-color

⚙ HTML

⚙ CSS

```
1 div {  
2   background:  
3     url(http://placehold.it/150) /* background-image */  
4     20px 20px / auto auto      /* background-position */  
5     background-size */*  
6     no-repeat                /* background-repeat */  
7     scroll                   /* background-attachment */  
8     padding-box border-box    /* background-origin */  
9     background-clip */  
10    indigo                   /* background-color */  
11 }  
12  
13 /* Default background values */  
14 * {  
15   background:  
16     none          /* background-image */  
17     0% 0% / auto auto /* background-position */  
18     background-size */*  
19     repeat        /* background-repeat */  
20     scroll        /* background-attachment */  
21     padding-box border-box /* background-origin background- */  
22     clip */  
23     transparent   /* background-color */  
24 }  
25 }
```

⚙ JS

Background Layers

Every background layer can have every background property except `background-color`

Only the bottom layer can use `background-color`

Background layers do not have a **z-index** property

They stack in the order they appear in the style sheet

1st background layer in CSS is rendered as top layer in the browser

Last background layer in CSS is rendered as bottom layer in the browser

Gradients

CSS gradients use the <gradient> data type

<gradient>

A CSS <image> made from a *progressive transition* between 2 or more colors

2 types of gradients

- » *linear*: progresses in a single direction
- » *radial*: radiates outward from a point

Both can repeat

Linear

Radial

linear-gradient*	10	>7	26	10	2.3 (-webkit) 4.4	6.1 (-webkit) 7.1
radial-gradient*	10	7	25	10	2.3 (-webkit) 4.4	6.1 (-webkit) 7.1

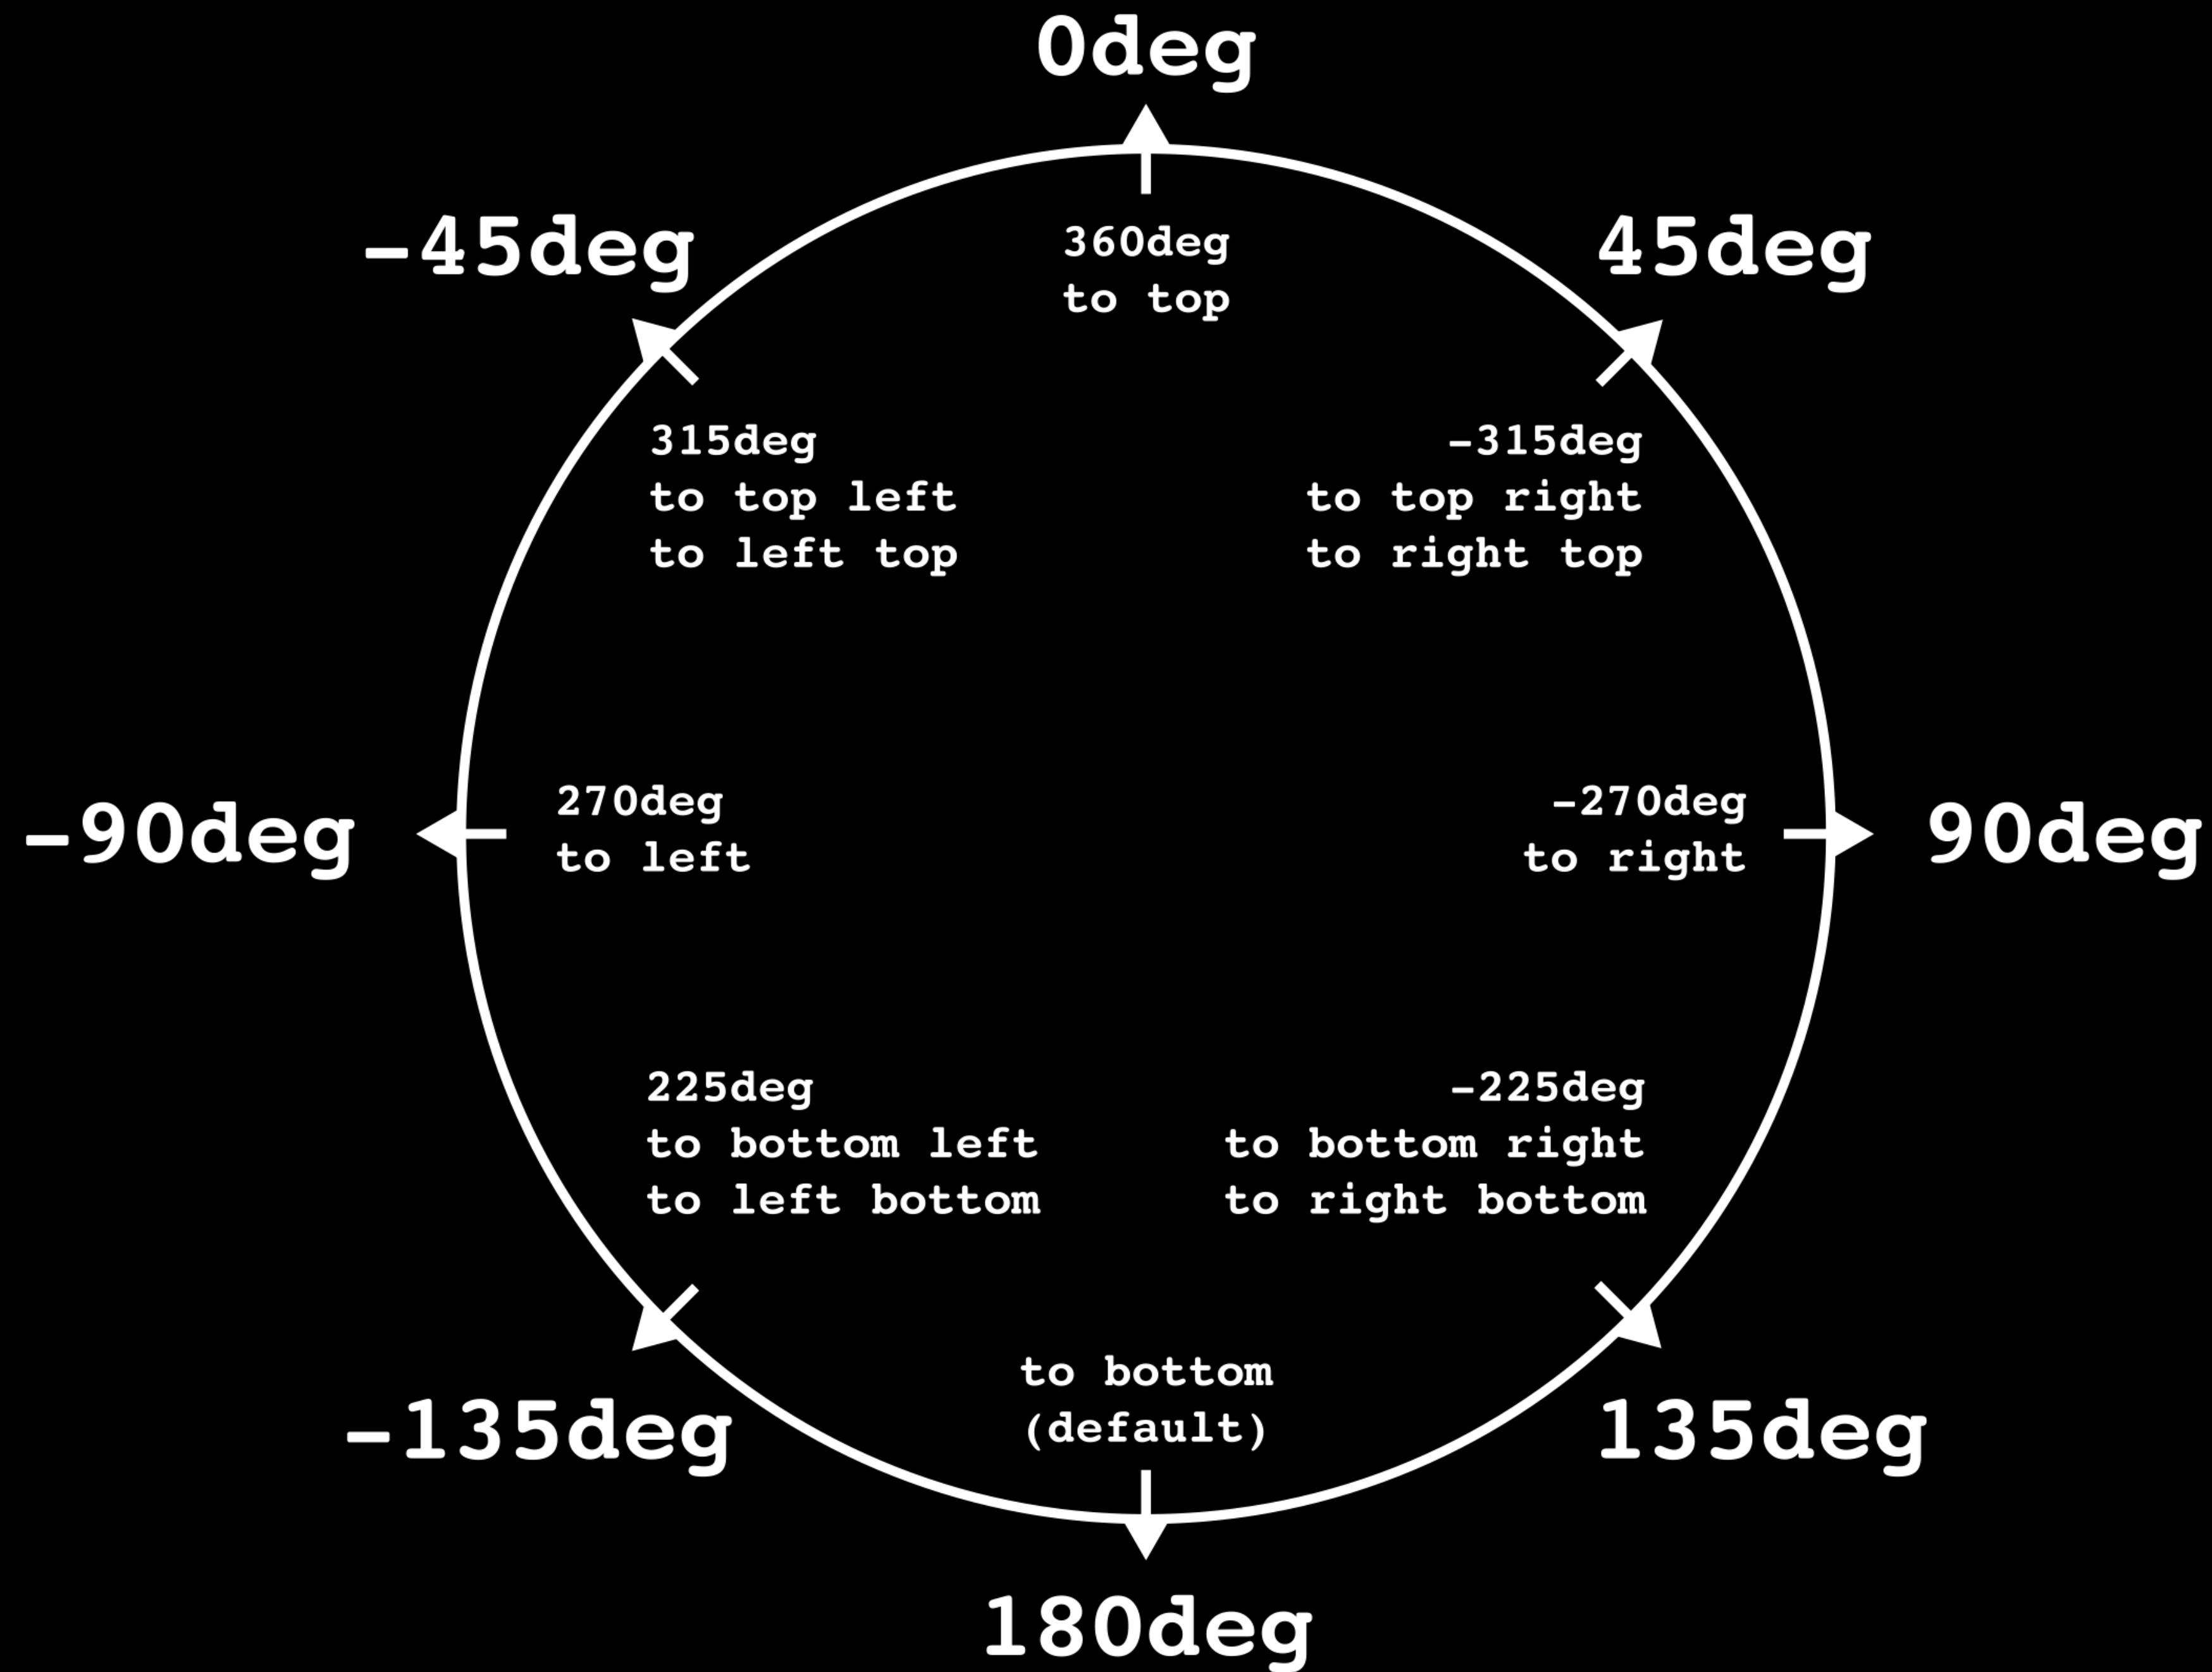

* Using correct finalized syntax

Linear

```
linear-gradient(45deg, red, blue)
```

Function that defines a linear gradient: *<angle>*
followed by two or more color stops

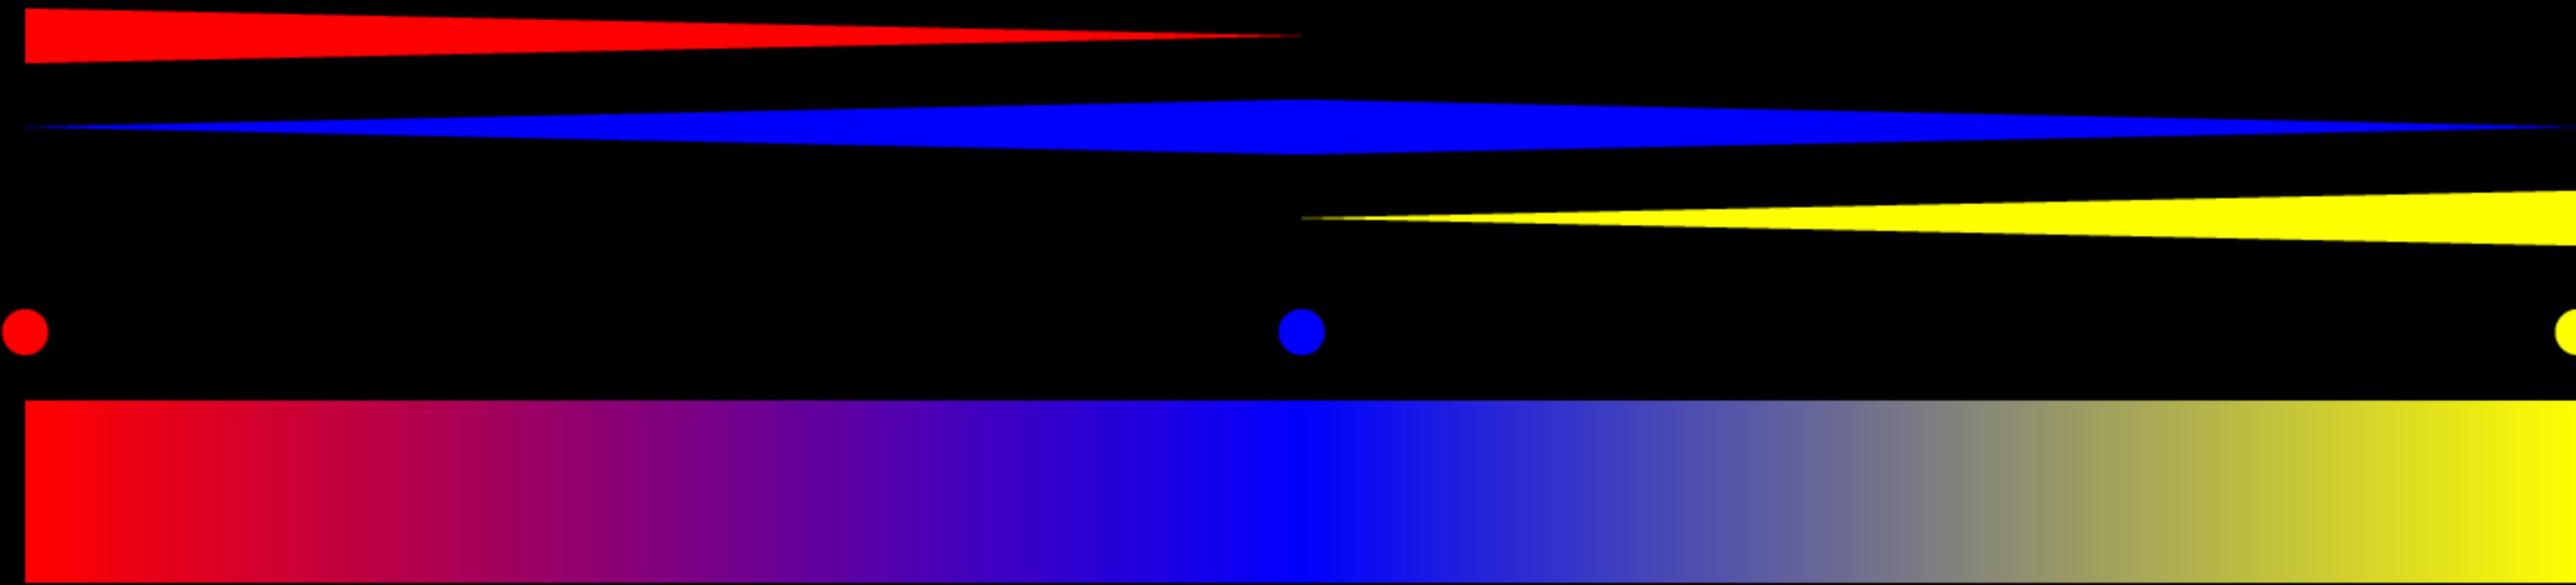

Color stops mark the point at which a gradient changes from one color to the next

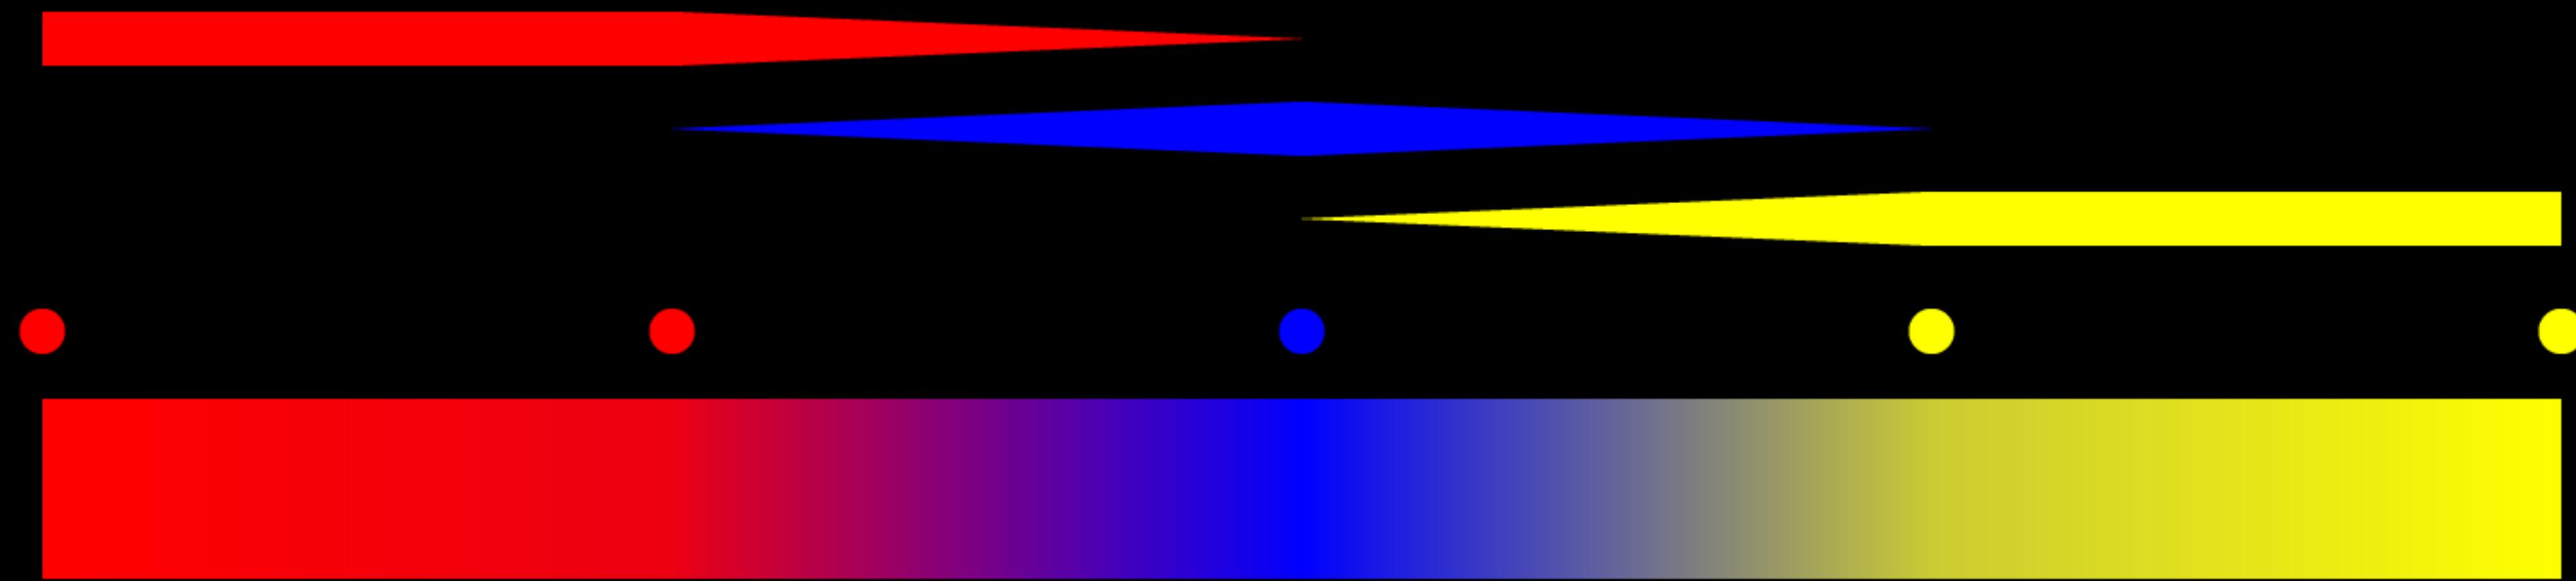

linear-gradient(90deg, red, yellow)

linear-gradient(90deg, red 0%, yellow 100%)

linear-gradient(90deg, red, blue, yellow)

linear-gradient(90deg, red 0%, blue 50%,
yellow 100%)

```
linear-gradient(90deg, red 25%, blue, yellow  
75%)
```

```
linear-gradient(90deg, red 0%, red 25%, blue  
50%, yellow 75%, yellow 100%)
```

```
linear-gradient(90deg, red, red, blue, yellow,  
yellow)
```

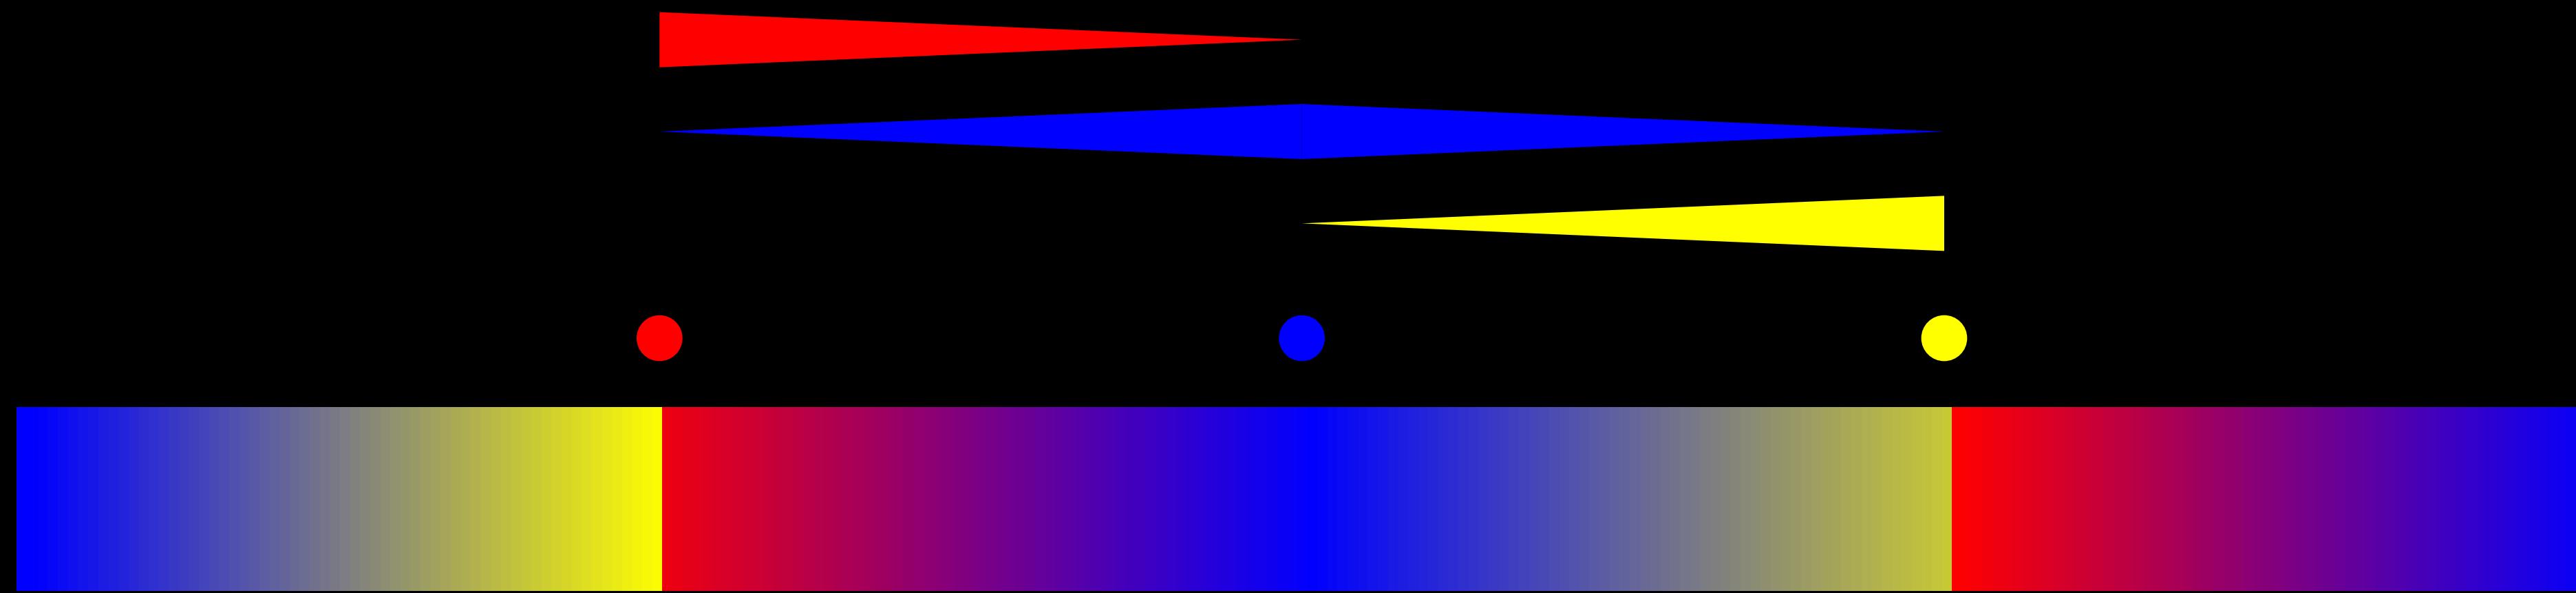

```
linear-gradient(90deg, red 25%, blue 25%, blue  
75%, yellow 75%)
```

```
linear-gradient(90deg, red 0%, red 25%, blue  
25%, blue 75%, yellow 75%, yellow 100%)
```

Function that defines a *repeating linear gradient*:
<angle> followed by two or more color stops

`repeating-linear-gradient(45deg, red 25%, blue 75%)`

Difference from non-repeating: color stops don't have to start & end at the edges of the containing block

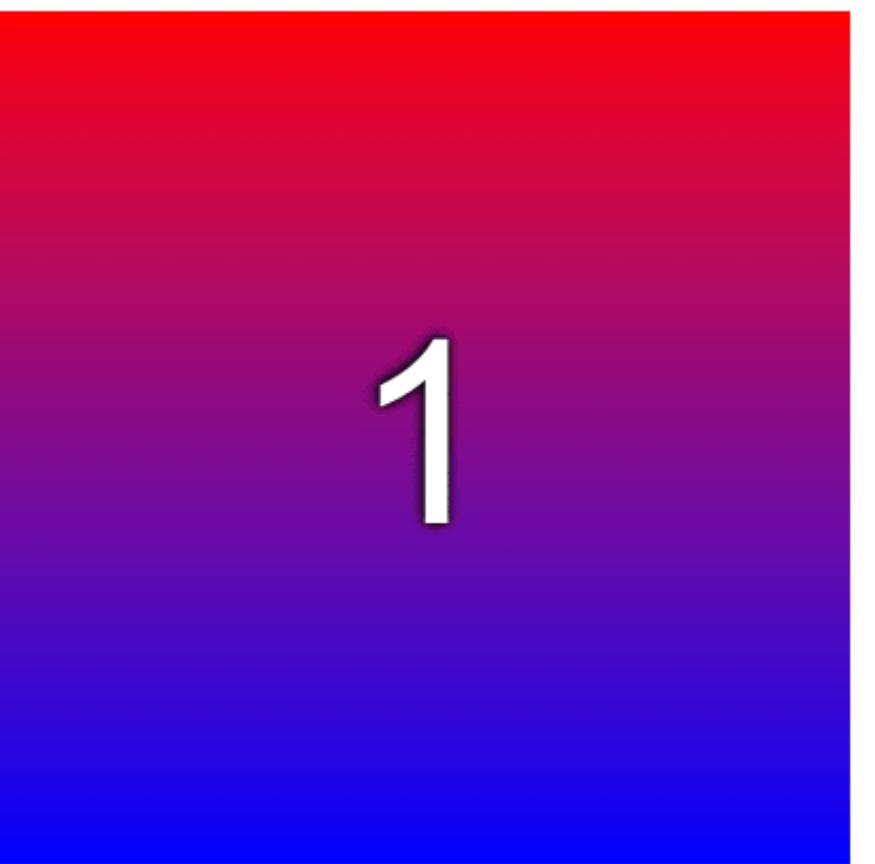

repeating-linear-gradient(90deg, red 25%,
blue, yellow 75%)

repeating-linear-gradient(90deg, ~~red 0%~~, red
25%, blue 50%, yellow 75%, ~~yellow 100%~~)

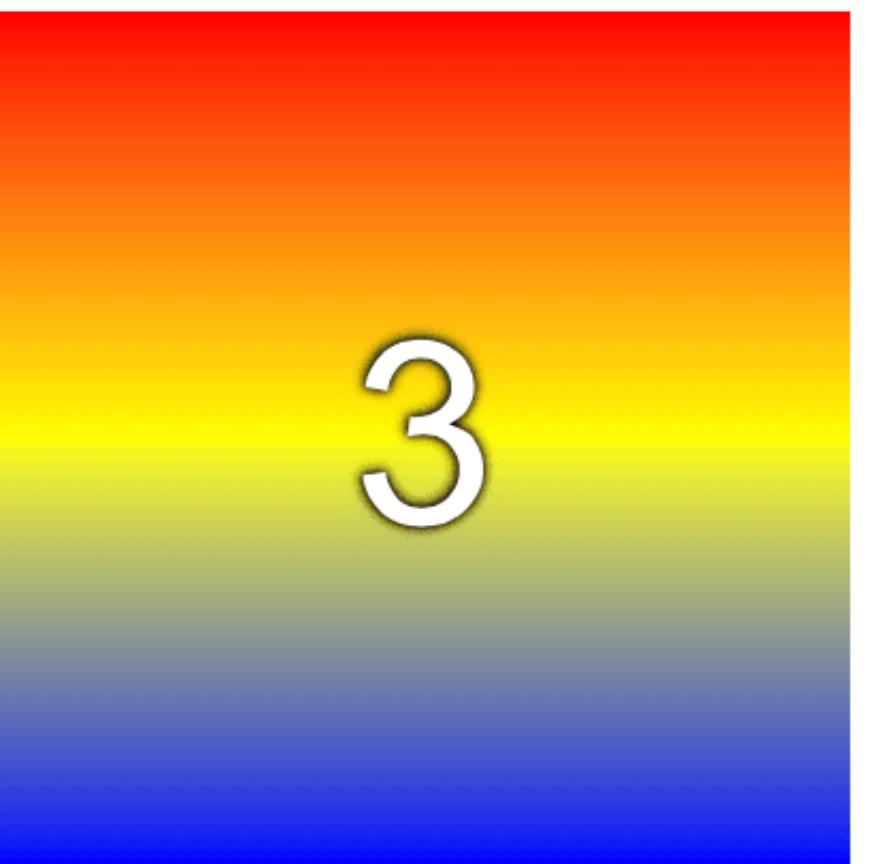

HTML

```
1 <div>1</div>
2 <div>2</div>
3 <div>3</div>
4 <div>4</div>
5 <div>5</div>
6 <div>6</div>
7 <div>7</div>
```

CSS

```
1 /* The basics, two color stops */
2
3 div:nth-of-type(1) {
4   background-image: linear-
5     gradient(red, blue);
6 }
7
8 /* Verbose, but same as first */
9
10 div:nth-of-type(2) {
11   background-image: linear-
12     gradient(180deg, red 0%, blue 100%);
```

JS

Radial

A radial gradient is created in 4 steps:

- » choose between *circle* or *ellipse* for the shape
- » pick the *center point* of the gradient using the `<position>` data type
- » define where the gradient should *end*
- » set two or more *color stops*

HTML

```
1 <div>1</div>
2 <div>2</div>
3 <div>3</div>
4 <div>4</div>
5 <div>5</div>
```

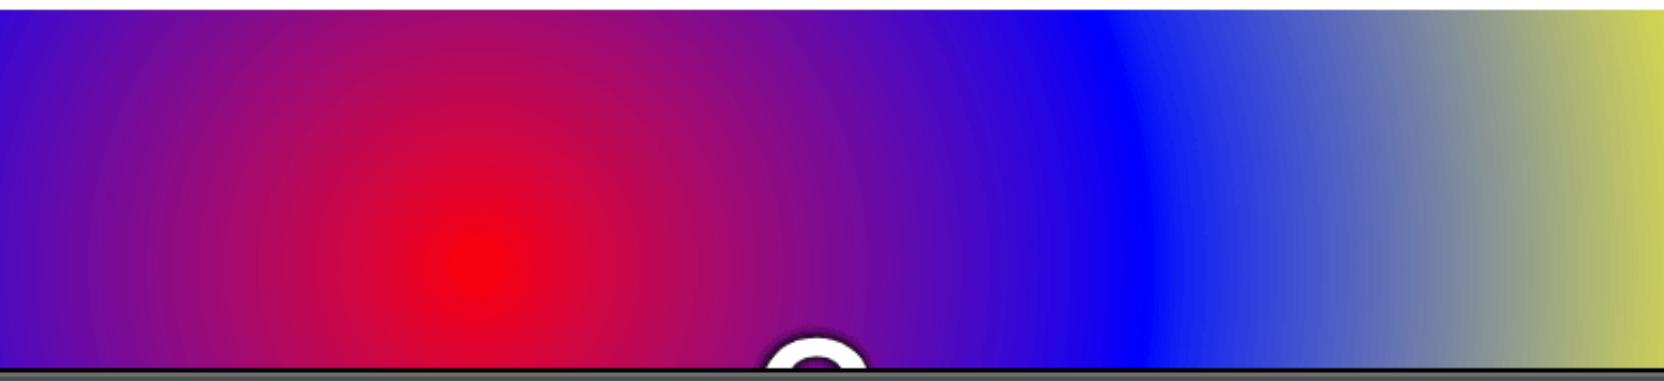

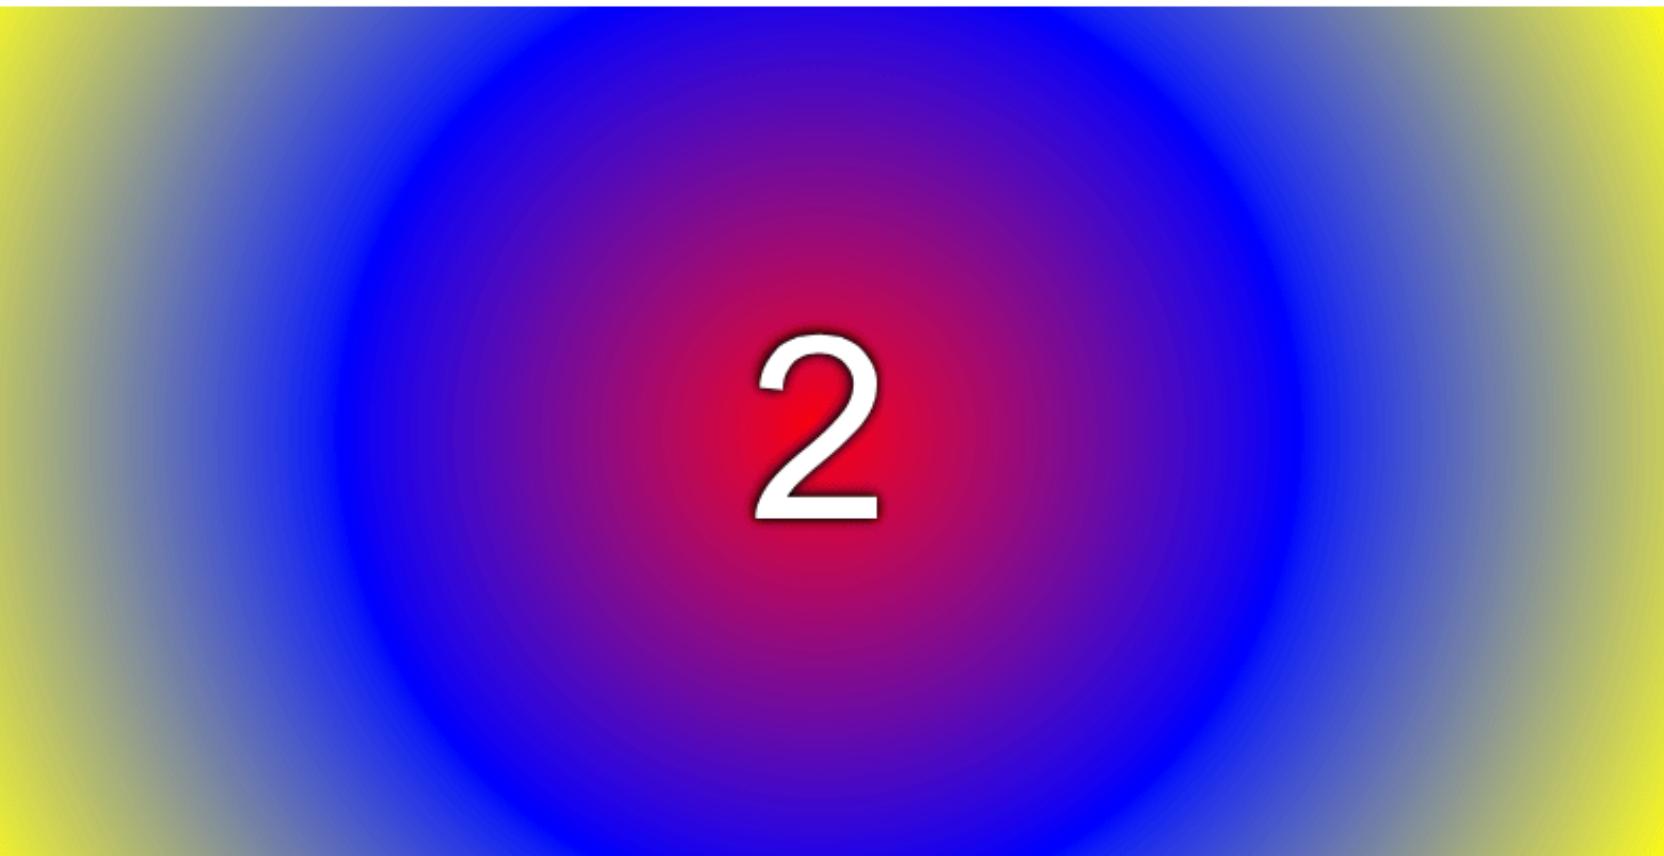

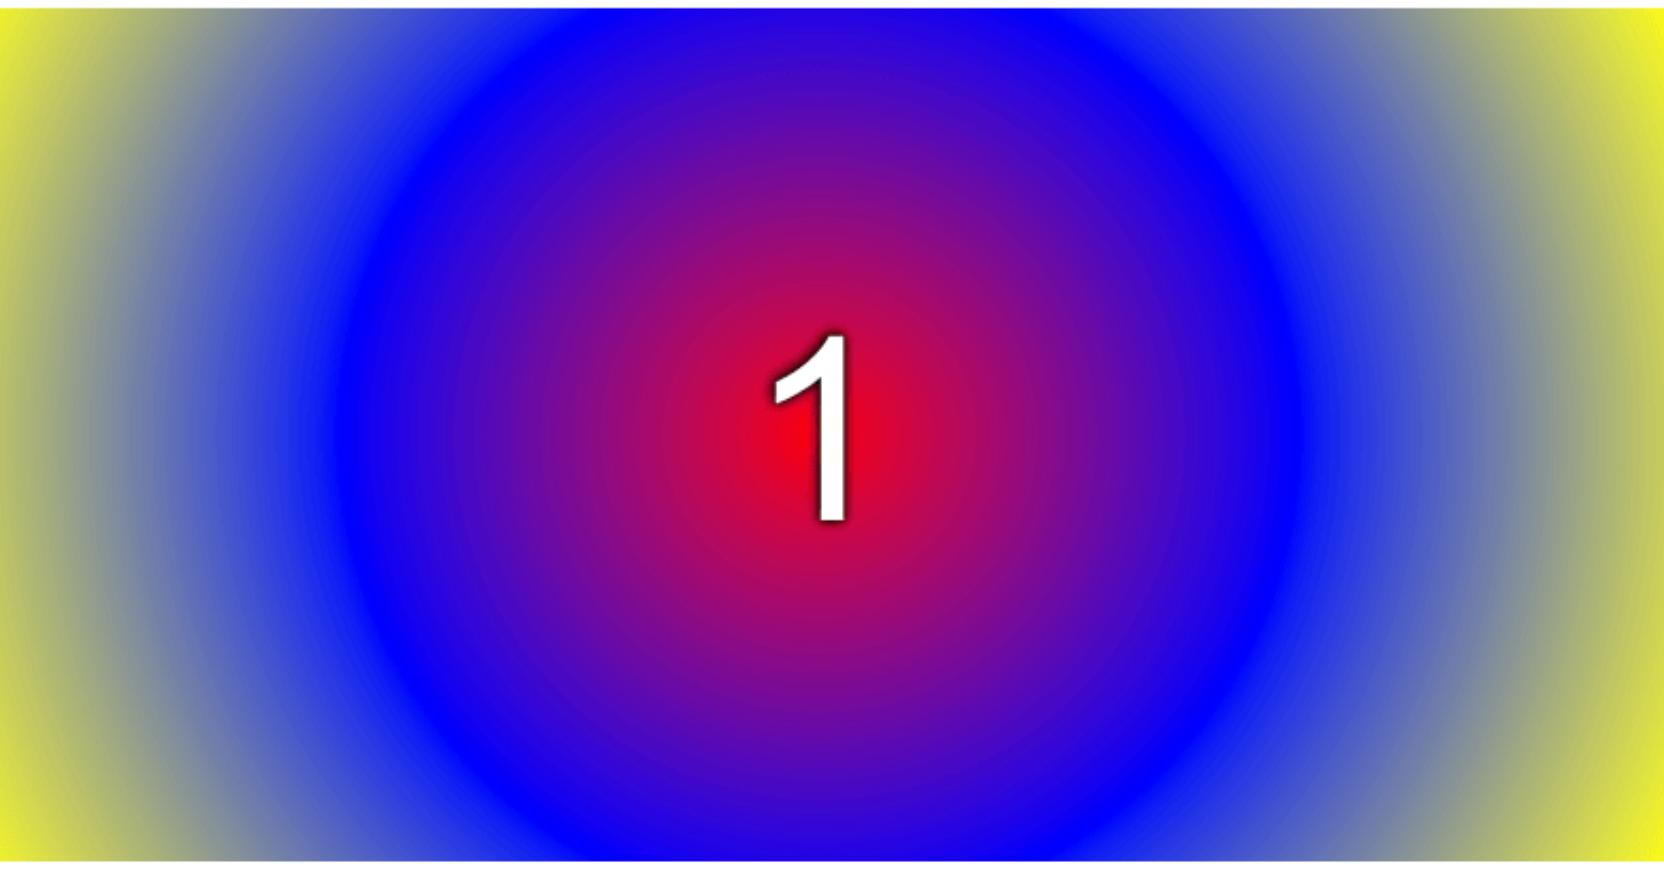

CSS

```
1 /* The basics, two color stops */
2
3 div:nth-of-type(1) {
4   background-image: radial-
5     gradient(circle, red, blue, yellow);
6 }
7
8 /* Verbose, but same as first */
9
10 div:nth-of-type(2) {
11   background-image: radial-
12     gradient(circle farthest-corner at 50%
```

`border-bottom-left-radius`

`border-radius`

Rounds corners or turns boxes into circles

⚙ HTML

⚙ CSS

```
1 div {  
2   border-radius: 2%;  
3 }  
  
4  
  
5 div {  
6   margin: 30px;  
7   border: 30px solid hsla(0, 100%, 50%,  
8   .5);  
9   padding: 30px;  
10  width: 300px;  
11  height: 300px;  
12  background-color: lightskyblue;  
13  text-align: justify;
```

It is said that in Ulthar, which lies beyond the river Skai, no man may kill a cat; and this I can verily believe as I gaze upon him who sitteth purring before the fire. For the cat is cryptic, and close to strange things which men cannot see. He is the soul of antique Aegyptus, and bearer of tales from forgotten cities in Meroe and Ophir. He is the kin of the jungle's lords, and heir to the secrets of hoary and sinister Africa. The Sphinx is his cousin, and he speaks her language; but he is more ancient than the Sphinx, and remembers that which she hath forgotten.

4   border-radius: 50%; /* or 50px */
5 }
6
7 .oval {
8   width: 200px;
9   height: 100px;
10  border-radius: 100px / 50%;
11 }
12
13 /* Uninteresting stuff below here */
14
15 div {
```

May 1981: Steve Jobs & crew are developing the Macintosh

“Steve suddenly got more intense. ‘Rectangles with rounded corners are everywhere! Just look around this room!’. And sure enough, there were lots of them, like the whiteboard and some of the desks and tables. Then he pointed out the window. ‘And look outside, there's even more, practically everywhere you look!’. He even persuaded Bill to take a quick walk around the block with him, pointing out every rectangle with rounded corners that he could find. ... Over the next few months, roundrects worked their way into various parts of the user interface, and soon became indispensable.”

box-shadow

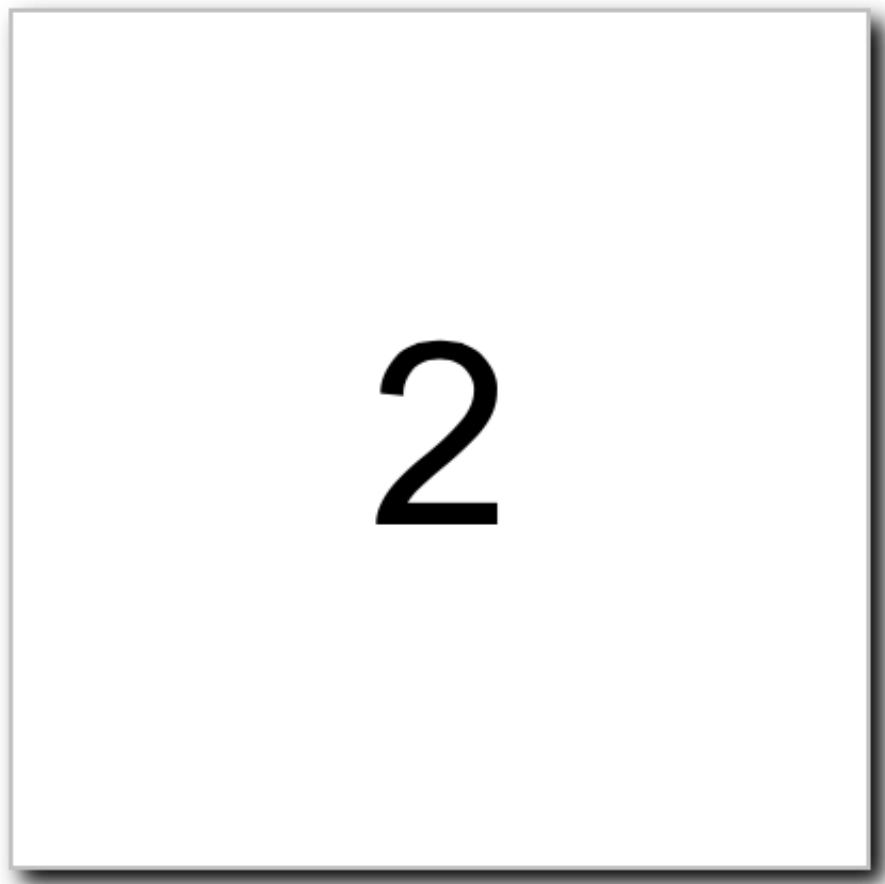

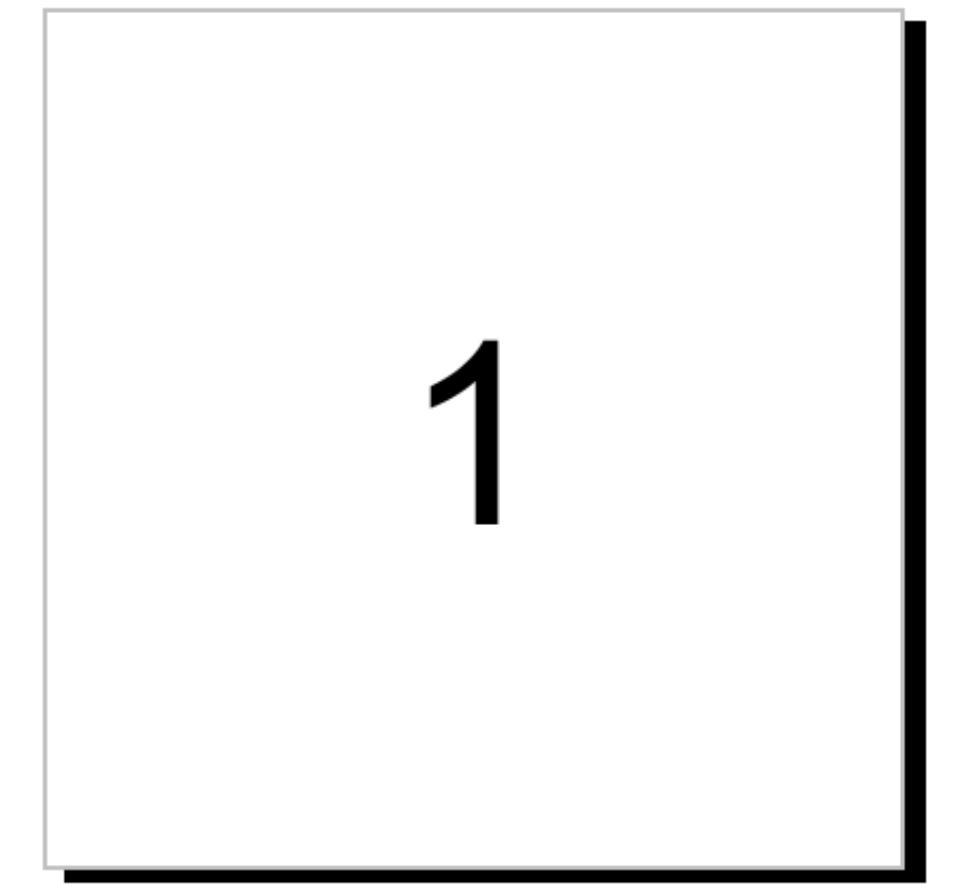

Creates attractive *shadow effects* on elements

Values

- » **inset**: if specified (default is not specified), shadows are drawn inside box
- » **<offset-x>**: **<length>** that sets horizontal distance
- » **<offset-y>**: **<length>** that sets vertical distance
- » **<blur-radius>**: **<length>** that sets blur size (default is 0)
- » **<spread-radius>**: Positive **<length>** causes shadow to expand; negative causes it to shrink (default is 0)
- » **<color>**: Color of shadow using **<color>**

Creating Shapes

You can create a huge variety of shapes using CSS

```
1 <h2>Square</h2>
2 <div id="square"></div>
3
4 <h2>Rectangle</h2>
5 <div id="rectangle"></div>
6
7 <h2>Circle</h2>
8 <div id="circle"></div>
9
10 <h2>Oval</h2>
11 <div id="oval"></div>
12
13 <h2>Egg</h2>
14 <div id="egg"></div>
15
16 <h2>Squircle</h2>
17 <div id="squircle"></div>
18
19 <h2>Rectoval</h2>
20 <div id="rectoval"></div>
21
22 <h2>Triangle Up</h2>
23 <div id="triangle-up"></div>
24
25 <h2>Triangle Down</h2>
26 <div id="triangle-down"></div>
27
```

For full licensing information, please see the last slide/page.

Changelog

2015-01-14 1.4: Updated compatibility chart for **radial-gradient**; added term *resource inlining* for Data URL

2014-08-06 1.3: Added Creating Shapes section; changed subtitle

Changelog

2014-08-04 1.2: Renamed presentation to “Decorating with CSS”; moved `transform` from “Animation” slides to here

2014-08-04 1.1.3: Moved Opacity section to Layout slideshow

2014-08-03 1.1.2: More screenshots & details for `border-radius`; fixed compatibility tables; defined `color stop`; added `background` screenshot

2014-05-15 1.1.1: Many corrections & additions
